1965-1

SEISMOLOGICAL BULLETIN

JANUARY - DECEMBER 1965

This report lists the P phase recordings obtained at the Seismological stations maintained by the Seismological Service of Canada. All earthquakes reported by station operators are included except for local earthquakes with an estimated magnitude less than 3. The association of many of the station readings with U. S. C. G. S. - determined earthquakes is no longer listed, and epicentral and instrumental data on local earthquakes no longer included. However a separate bulletin containing full information on Canadian earthquakes during 1965 will be issued as soon as possible. The seismological stations are divided into two divisions.

EASTERN DIVISION

Alert, N. W. T. - station code, ALE

Owned and operated by the Dominion Observatory. Station seismologist during 1965 was J. Hogg, succeeded by E. Mortensen.

Baker Lake, N. W. T. - station code, BLC

Owned and operated by the Dominion Observatory. Station seismologist in 1965 was B. Przybylski.

Coppermine, N. W. T. - station code, CMC

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Edmonton, Alberta - station code, EDM

Owned by the University of Alberta. Operated under contract for the Dominion Observatory by the University of Alberta.

Flin Flon, Manitoba - station code, FFC

Owned by the Dominion Observatory. Operated by the R. C. A. F., Department of National Defence.

Frobisher, N. W. T. - station code, FBC

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Great Whale River, Quebec - station code, GWC

Owned and operated by the Dominion Observatory. Station seismologist in 1965 was E. Cowan.

EASTERN DIVISION (Cont'd)

Halifax, Nova Scotia - station code, HAL

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by Dalhousie University.

London, Ontario - station code, LND

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the University of Western Ontario.

Montreal, Quebec - station code, MNT

Owned and operated by Jean de Brebeuf College with contract support from the Dominion Observatory (courtesy, M. Buist, S. J., Director).

Mould Bay, N. W. T. - station code, MBC

Owned and operated by the Dominion Observatory. Station seismologist during 1965 was W. T. Piché.

Ottawa, Ontario - station code, OTT

Owned and operated by the Dominion Observatory.

Resolute, N. W. T. - station code, RES

Owned and operated by the Dominion Observatory. Station seismologist during 1965 was O. J. Jensen succeeded by A. Taylor.

Saint John's, Newfoundland - station code, STJ

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by Memorial University.

Scarborough, Ontario - station code, SCB

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Schefferville, Quebec - station code, SCH

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by McGill University Sub-Arctic Research Laboratory.

Sept-Iles, Quebec - station code, SIC

Owned and operated by the North Shore and Labrador Railway Company, Sept-Iles, Quebec, with contract support from the Dominion Observatory.

Seven Falls, Quebec - station code, SFA

Owned and operated by the Dominion Observatory. Station seismologist during 1965 was B. Racine.

Shawinigan Falls, Quebec - station code, SHF

Owned by the Shawinigan Water & Power Company. Operated by the Company for the Dominion Observatory.

EASTERN DIVISION (Cont'd)

Yellowknife, N. W. T. - station code, YKC

Owned and operated by the Dominion Observatory. Station seismologists during 1965 were R. L. Hewitt and M. A. Nimmo.

WESTERN DIVISION

Banff, Alberta - station code, BAN

Operated by the Banff School of Fine Arts with contract support from the Dominion Observatory.

Fort St. James, British Columbia - station code, FSJ

Owned and operated by the Dominion Observatory. Station seismologist during 1965 was T. S. Browne.

Penticton, British Columbia - station code, PNT

Owned and operated by the Dominion Observatory. Station seismologist during 1965 was W. H. McNaughton succeeded by M. Wilde.

Port Hardy, British Columbia - station code, PHC

Owned by the Dominion Observatory. Operated under contract for the Dominion Observatory by the Radiosonde Division, Meteorological Branch, Department of Transport.

Victoria, British Columbia - station code, VIC

Owned and operated by the Dominion Observatory. The operating centre of the western division is the Dominion Astrophysical Observatory, Department of Mines and Technical Surveys, R.R. 7, Victoria, B.C.

First-order standard stations commissioned during 1965 were Fort St. James, British Columbia, Feb. 22, Flin Flon, Manitoba, May 12, Baker Lake, N. W. T., July 26 and Great Whale River, Quebec, Sept. 27. The second order station at Shawinigan Falls, Quebec was closed down on Dec. 8.

Records for all stations of the Seismological Service are stored on 35 mm microfilm in Ottawa. Positive microfilm copies, or full scale prints, are available to cooperating institutions on request to the Chief of the Division of Seismology, Dominion Observatory, Carling Avenue, Ottawa, Ontario, Canada.

Magnification curves for all the various seismographs operated at the stations are found on the following pages: an estimated calibration only is available for Banff. The remaining curves are obtained by application of the Willmore bridge method on site. Earlier bulletins have given an explanation of these curves: the magnification and acceleration sensitivity of any instrument is simply determined by multiplying the velocity sensitivity by $\frac{2}{T} \pi$ or $\frac{T}{2} \pi$ respectively. The magnification curves

show the periods of the seismometers and the galvanometers, and summary information on the coordinates, altitude, foundation material and date of calibration is included.

The phase response as a function of period of the various seismographs has been calculated in Ottawa, whenever useful, by using a digital computer. Such information is available on request. When the Canadian standard seismic network is nearer completion, and some instrumental settings no longer experimental, a bulletin will be issued containing the phase response calibration curves.

Following the calibration curves, computer listings are given of the P phases recorded at the stations of the network. This information is identical to that supplied immediately from certain selected stations to the United States Coast and Geodetic Survey for preliminary epicentral determinations, and from all stations with a time lag of several months to the International Seismological Research Centre and elsewhere for the definitive epicentral catalogues. The station three letter code is followed by the day of the month, the P onset in hours, minutes and seconds (tenths of seconds if impulsive) and either emergent, EP, or impulsive, IP, phase character. Wherever possible the direction of first motion of the short period vertical seismograph is indicated by either a C for compression or a D for dilatation. The listing from the station data supplied on punch cards to international organizations has been machine sorted into chronological order for each month of the year.

Mr. R. J. Halliday continued as engineer-in-charge of quality control of the seismic network and Mr. F. Lombardo as the senior technical officer for station maintenance, calibration and installation. Dr. F. Kollar was in charge of the central seismological laboratory in Ottawa supporting and servicing the network.

Kenneth Whitham
Chief, Division of Seismology

NOTES FOR 1965

1. Alert, N. W. T. A new S. P. E. W. galvanometer was installed (with no calibration) on July 7, 1965. The magnification curve is approximately that of the S. P. N. S.
2. Baker Lake, N. W. T. A 6-component Canadian Standard Station was commissioned July 26, 1965. The S. P. seismographs were calibrated July 20, and the L. P. seismometers set to 15 second periods and calibrated July 20-24.
3. Banff, Alberta S. P. Z. polarity is believed to be reversed all year (downtrace equivalent to earth compression). The directions printed in the bulletin have been corrected for this error.
4. Flin Flon, Manitoba A 6-component Canadian Standard Station was commissioned May 12, 1965. The S. P. seismographs were calibrated May 4, and the L. P. seismometers set to 15 second periods and calibrated May 11.
5. Fort St. James, B. C. A 6-component Canadian Standard Station was commissioned February 22, 1965. The S. P. seismographs were calibrated February 22 and the L. P. seismographs calibrated February 24-25. The L. P. seismometers were changed from 30 to 15 second periods and the seismographs recalibrated October 5-7.
6. Frobisher, N. W. T. L. P. Z. seismometer period was reset to 30 seconds February 2, 1965 with no recalibration.
7. Great Whale River, Quebec A 6-component Canadian Standard Station was commissioned September 27, 1965. The S. P. seismographs were calibrated September 21-22, and the L. P. seismometers set to 15 second periods and calibrated September 24-25.
8. Halifax, N. S. A MK 2 S. P. Z. Willmore seismometer was installed September 22. A new power Console and new Sprengnether chronometer were installed August 3.

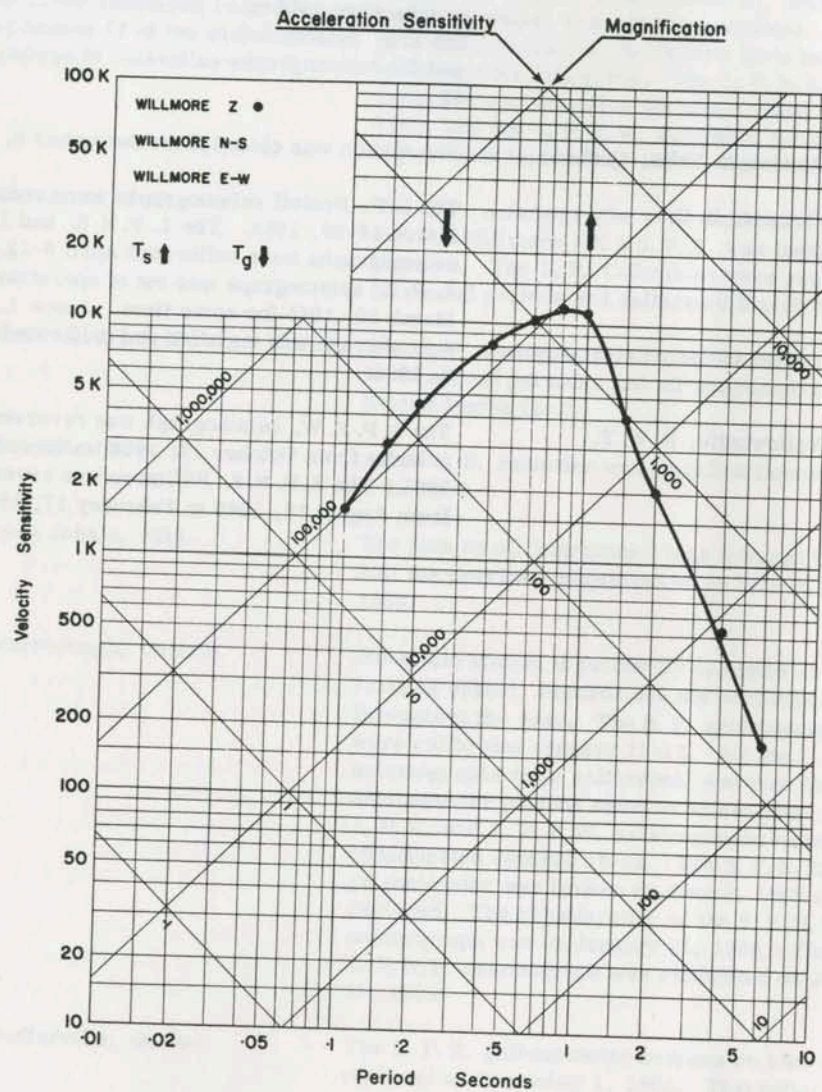

9. Montreal, Quebec
From October 6 to November 6, 1965 the L. P. N. S. Columbia seismograph was reversed in polarity; also its sensitivity was much higher than the magnification curves show due to a partially open resistor in the attenuator.
10. Ottawa, Ontario
The S. P. Z. Willmore seismograph was reversed in polarity August 10 to October 22, 1965 (down-trace equivalent to earth compression). The directions printed in the bulletin have been corrected for this error. The L. P. N. S. Columbia was moved to the upper vault, June, 1965, and the L. P. E. W. Columbia moved to the upper vault September, 1965.
11. Penticton, B. C.
The S. P. seismographs were calibrated March 3-5. A Willmore MK 2 S. P. Z. was installed March 3. The L. P. Columbias were reset to 30 second periods and calibrated March 7-8.
12. Port Hardy, B. C.
The L. P. Columbia seismometers were reset to 30 second periods, and all instruments recalibrated March 12-17.
13. Resolute, N. W. T.
A new S. P. recorder was installed December 1-2, 1965.
14. Saint John's, Nfld.
The gain on all instruments was lowered to half the previous magnification on March 16, 1965.
15. Scarborough, Ontario
Since this station is primarily operated as a training school, records are not continuous throughout the year. The S. P. seismographs were calibrated January 11-12. All the L. P. seismographs were calibrated, and then the seismometer periods reset to 30 seconds. The L. P. Z. and L. P. E. W. seismographs were then recalibrated January 18-21. The S. P. N. S. galvanometer was broken on June 8, 1965 and replaced. The recalibration of the S. P. N. S. seismograph was on January 21, 1966. The L. P. N. S. seismograph was calibrated on June 11, 1965.
16. Schefferville, Quebec
The L. P. Z. galvanometer suspension tube was replaced on December 1, 1965. Thereafter the calibration of the seismograph is an estimated one only.

17. Seven Falls, Quebec
The S. P. Z. polarity was corrected on February 25, 1965 (to make uptrace equivalent to earth compression). The directions printed in the bulletin have been corrected for this error. The station was closed August 3-26 when the operator was on vacation. The station was commissioned November 13 as a 6-component Canadian Standard Station. The S. P. seismographs were calibrated November 10-11 and the L. P. seismometers set to 15 second periods and the seismographs calibrated November 11-12.
18. Shawinigan Falls, Quebec
The station was closed down December 8, 1965.
19. Victoria, B. C.
The S. P. Benioff seismographs were recalibrated March 18-20, 1965. The L. P. N. S. and L. P. E. W. seismographs were calibrated April 6-12. The L. P. Z. seismograph was out of operation from March 20, 1965 for some time. A new L. P. Z. seismograph was installed and calibrated May 6, 1966.
20. Yellowknife, N. W. T.
The S. P. E. W. seismograph was reversed in polarity from October 19, 1964 to November 4, 1965. The S. P. N. S. Willmore was reversed from August 16, 1965 to February 17, 1966.
