

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

The International Seismological Summary for 1918 *(Continued).*

FORMERLY THE BULLETIN OF THE
BRITISH ASSOCIATION SEISMOLOGY COMMITTEE.

The present Number contains the information for April, May, and June, 1918, following on that for January, February, and March, already given. The history of the publication is given in the first few pages of the former Number.

It was intended to print, on the last page of the former Number, the usual copy of Tables in use, for every 1° of distance from the Epicentre. But the matter printed came so near to 40 pages that it was found inconvenient to add this page. As an alternative, the Tables have been expanded, as far as $\Delta = 90^{\circ}$, to every $0^{\circ}.1$, and printed in a separate pamphlet, issued herewith. Beyond $\Delta = 90^{\circ}$ the true P and S begin to fail (though they are occasionally recorded even to large values of Δ : see, for instance, the La Paz records on 1918 January 30, in the last Number), so that tabulation to 1° is considered sufficient at present.

The number of Stations which send records has greatly increased, as may be seen, for instance, by a glance at the Earthquake of May 20d. 14h. This earthquake will also serve to show that none of this information is superfluous, if our knowledge is to advance. In spite of the number of stations, the determination of epicentre and time of occurrence present some difficulties, and the residuals cannot be considered satisfactory. Those of stations near the Epicentre are chiefly negative, and those further away chiefly positive. Displacement of the epicentre cannot reconcile them. The hypothesis of a high focus is suggested by the residuals for Batavia and Manila, but was tried and proved unsuccessful. The key to the solution has not yet been found, but this presentation of the residuals may suggest it to some other investigator. In this and many other cases, after spending a reasonable time on them, it was necessary to print some solution, even if obviously faulty, in order to avoid undue delay in catching up the arrears.

H. H. TURNER.

University Observatory, Oxford,
1928 June 11th.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

De Bilt	21.4	24	—	—	—	—	10.1	10.8

San Fernando gives MN = +2.2m. Paris eS = +8m.55s. De Bilt MN = +11.3m.

April 1d. Records also at 0h. (San Fernando), 1h. (La Paz), 8h. (Helwan and Zi-ka-wei), 9h. (De Bilt), 14h. (Monte Cassino and La Paz), 16h. (Monte Cassino), 18h. (Marseilles), 20h. (Lick), 22h. (Lick and Batavia).

April 2d. 3h. 33m. 20s. Epicentre 36°.0N. 138°.0E. (as on 1915 Oct. 8d.).

$$\Delta = -\cdot 601, \quad B = +\cdot 541, \quad C = +\cdot 588.$$

	Δ	P.	O-C.	L.	M.E.	M.N.
	°	m. s.	s.	m.	m.	m.
Nagoya	1.2	17	- 1	—	—	—
Osaka	2.5	63	+ 43	1.8	2.7	3.6
Kobe	2.7	e 49	+ 7	1.8	—	—
De Bilt	82.7	—	—	e 42.7	50.7	50.4

Tokio ($\Delta = 1^{\circ}.5$) gives P = +2m.0s., S = +3m.52s. It is difficult to reconcile these readings with the others, for it seems clear that if the others are worth anything at all the epicentre must be nearer Nagoya than Osaka and Kobe, and thus must also be within a few degrees of Tokio. If we neglect Nagoya we could get a fair agreement by putting the epicentre at 33°.5N. 128°.5E.

April 2d. Records also at 0h. (San Fernando), 2h. (Zi-ka-wei), 13h. (Paris), 21h. (San Fernando), 22h. (Lick).

April 3d. Records at 1h. (De Bilt, La Paz, and Helwan), 3h. (Manila and Bidston), 5h. (Helwan), 15h. (Batavia).

April 4d. Records at 1h. (Riverview), 12h. (Tortosa), 17h. (Helwan and Manila).

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

1918. April 10d. 2h. 3m. 44s. Epicentre 44°0N. 131°0E.

$$A = -472, B = +543, C = +695; D = +755, E = +656;$$

$$G = -456, H = +524, K = -719.$$

The determination of this epicentre does not seem possible without assuming a very deep focus. La Paz, near the anticentre, supports this quite definitely, and in the following a focal depth 0.070, has been assumed.

NOTES TO APRIL 10d. 2h. 3m. 44s.

Additional records: Kobe gives MN = +4·2m., Osaka MN = +5·0m. Manila MN = +12·0m., T₀ = 2h.3m.53s. Colombo M = +28·8m. Lemberg T₀ = 2h.3m.53s. Dyce i = +12m.47s., iS = +19m.53s. Edinburgh M = +19·8m. De Bilt i_s = +20m.3s., e = +22m.52s. and +27m.16s., m = +29m.12s. and +29m.25s., eLN = +36·3m., MN = +46·4m., T₀ = 2h.3m.51s. Zagreb IP = +10m.50s., MNW = +44·3m., T₀ = 2h.3m.50s. Eskdalemuir T₀ = 2h.2m.43s. Stonyhurst says "Doubtful case. Maximum at S." Uccle i_s = +12m.54s., i_e = +13m.55s., T₀ = 2h.3m.51s. Berkeley T₀ = 2h.3m.48s. Pola MN = +30·0m., T₀ = 2h.3m.38s. Zurich T₀ = 2h.3m.46s. Moncalieri T₀ = 2h.3m.38s. Paris T₀ = 3h.3m.52s. Riverview S = +20m.39s., SR₁ = +24m.8s., MN = +37·0m., T₀ = 2h.3m.45s. Barcelona T₀ = 2h.3m.48s. Algiers T₀ = 2h.4m.11s. Lawrence P = +12m.3s., MN = +22·1m. Ottawa eN = +21m.33s. and +23m.4s., eLN = +24·8m., LN = +27·3m., and +36·3m. Coimbra T₀ = 2h.8m.24s. Toronto records S as L, also L = +35·1m. San Fernando T₀ = 2h.2m.13s. Georgetown SE? = +21m.47s. La Paz gives T₀ = 2h.9m.17s., and what may be a subsequent shock, in which P = 2h.43m.18s., L = 3h.37m.36s.

The following determination was originally made for this earthquake (1918 April 10d.) without making any allowance for the depth of the focus. It serves to show how difficult it is to obtain a determination without some assumption of the kind.

1918. April 10d. 2h. 3m. 44s. Epicentre 40°ON. 110°OE.

$$A = -262, B = +720, C = +643; D = +940, E = +342; G = -220, H = +604, K = -766.$$

Additional records: Athens iP = +53s., M = +1.9m. and +2.0m., T₀ = 14h.20m.25s. Pola MN = +4.7m. It seems improbable that the La Paz record belongs to the above shock.

April 17d. Records also at 0h. (Mizusawa), 2h. (Zagreb and Rocca di Papa), 4h. (Zagreb, Rocca di Papa, and Harvárd), 5h. (Osaka), 20h. (Rocca di Papa and Athens), 21h. (Monte Cassino and La Paz), 22h. (San Fernando).

April 18d. 2h. 54m. 45s. Repetition from 42°N. 13°E. (as on 1918 April 5d.).

$$A = +\cdot722, B = +\cdot173, C = +\cdot669.$$

MN = 16h.50m.42s., PE = 16h.47m.42s., ME = 16h.50m.48s. Simla gives
e = 14h.34m.48s. Possibly a mistake. Zi-ka-wei MN = +70·8m. Apia
S? = +57m.9s. and +66m.9s. Osaka MN = +75·7m. Batavia M = +28·2m.
ML₂ = +116·2m. Manila MN = +81·9m. Melbourne SR₁ = +47m.9s., SR₂
= +48m.27s., S = +78m.33s., SR₁ = +80m.27s. Riverview e = +43m.15s.,
+43m.37s., +44m.32s., and +44m.57s., MN₁ = +67·1m. The residuals
[+13] and [+14] for Batavia and Manila suggest a "high focus," and this
would suit some other features of the records, but not all. The La Paz
records could not be reconciled with those of Europe on this supposition.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

1918. May 20d. 17h. 55m. 5s. Epicentre 29°S. 71°W.

A = +276, B = -823, C = -494; D = -948, E = -317;
G = -157, H = +468, K = -870.

The few anticentric observations suggest a deep focus, which would account for the negative residuals in the azimuth of La Paz, but the evidence is scarcely sufficient to warrant a definitive solution.

De Blit eSR₁ = +28m.10s., M = +42.6m., T₀ = 11h.57m.46s. Barcelona PS = +25m.24s., MN = +53.6m. Moncalieri S = +32m.10s., MN = +45.0m. Pola MN = +50.1m. Zagreb e = +34m.28s. Osaka MN = +45.2m. Zi-ka-wei MN = +69.7m. These records have been corrected by +1h. Riverview PS = +30m.52s., SR₁ = +35m.24s., MN = +59.0m. Helwan records a shock earlier than T₀, which has been corrected by +1h. Manila S = +39m.9s. (=SR₁?). Melbourne PR₁ = +36m.40s., S = +44m.16s., SR₂ = +56m.52s. Kodaikanal the P has been corrected by -1h.

May 23d. Records also at 1h. (Kodaikanal), 2h. (Colombo and Kodaikanal), 6h. (Helwan), 9h. (Sydney, Apia, and Riverview), 10h. (Melbourne, La Paz, and Kodaikanal), 14h. (Toronto), 16h. (Taihoku), 20h. (Edinburgh).

May 24d. Records at 0h. (San Fernando), 2h. (Kodaikanal), 3h. (Rocca di Papa) 15h. (Zurich and Stonyhurst), 16h. (Taihoku and Zi-ka-wei), 17h. (Melbourne and Riverview), 18h. (Perth and Riverview), 19h. (La Paz (2) and Helwan), 23h. (Riverview).

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

1918. May 25d. 19h. 29m. 25s. Epicentre 31°0S. 91°0W.

A = - .015, B = - .857, C = - .515; D = - 1.000, E = + .017;
G = + .009, H = + .515, K = - .857.

In making this determination it has been found necessary to assume a depth of focus 0°015; without taking such a measure it was found impossible to bring the North American observations into line with those of Riverview, La Paz, and South American stations.

NOTES TO MAY 25d. 19h. 29m. 25s.

Additional records : La Quiaca records MN as +1.2m. Comparing this with ME this is probably a misprint for 10m. later. La Paz i = +10m.50s. and +11m.47s., T_o = 19h.29m.9s. Rio de Janeiro SE = +14m.35s. Vieques, eLE = +16.9m. Washington L = +31.6m., T_o = 19h.29m.30s. Georgetown records S as L for both components, and gives as SE and SN respectively, +15m.59s. and +15m.55s. Toronto gives S as L. Harvard T_o = 19h.29m.34s. Northfield eL = +28.4m. Ottawa i = +26.4m., L = +43.6m., and +58.6m., T_o = 19h.29m.26s. Sydney M = +47.6m. Riverview eS = +25m.46s., eSR₂ = +30m.17s. and +30m.52s., T_o = 19h.29m.24s. Melbourne S is given as SR₁. PR₁, given as S, = 19m.35s., SR₂ = +25m.41s. San Fernando MN = +34.6m. Coimbra SN = +27m.27s., ISR₁ = +33m.23s., LN = +46.3m., MN = +54.0m. Barcelona i₁ = +34m.4s. Eskdalemuir SR₁ = +34m.24s. Paris e = +18m.35s. Uccle SR₁ = +35m.35s. De Bilt PR₁ = +19m.48s., mE = +29m.48s., mN = +29m.49s., LN = +59.6m., MN = +60.2m. Epicentre 30°0S., 92°0W. Zagreb eNW = +18m.54s., MNW = +66.6m. Lemberg i = +22m.23s. Helwan gives P = +15m.41s.

May 25d. Records also at 1h. (San Fernando), 3h. (Taihoku), 11h. (Denver, Helwan, and La Paz), 14h. (Riverview), 16h. (Helwan), 18h. (La Paz), 20h. and 22h. (Mizusawa), 23h. (De Bilt).

May 26d. Records at 2h. (Colombo), 5h. (San Fernando), 10h. (Ottawa), 19h. (Batavia (2), Manila, and Pompeii), 20h. (Helwan, Riverview, and Colombo).

May 27d. 16h. 8m. 41s. Epicentre close to Uccle, which records iP at the above time. De Bilt ($\Delta = 1^{\circ} 4$) gives P = +23s., L = +50s., ME = +1.0m. Paris ($\Delta = 2^{\circ} 2$) gives eP = +43s., eS = +1m.17s., L = +1.6m.

May 27d. Records also at 0h. (San Fernando), 10h. (Helwan), 12h. (Denver), 13h. (Batavia), 14h. (Osaka).

May 28d. 8h. 21m. 9s. Epicentre near Uccle (as on May 27d.). De Bilt ($\Delta = 1^{\circ} 4$) gives P = +25s.

May 28d. Records also at 0h. (San Fernando), 5h. (Rocca di Papa), 14h. (Tacubaya), 16h. (Denver and Mizusawa), 21h. (San Fernando).

May 29d. Records at 0h. (La Paz), 2h. (Zagreb), 12h. (Zagreb (2)), 13h. (Denver), 16h. (Moncalieri).

May 30d. Records at 0h. (Manila), 1h. (San Fernando), 5h. (Helwan and Kodai-kanal), 8h. (La Paz), 16h. (Helwan), 19h. (San Fernando), 22h. (Ottawa,), 23h. (De Bilt).

May 31d. 5h. 5m. 40s. (I) Epicentre 37°0N. 143°0E. (as on 1915 Nov. 18d.).
5h. 19m. 0s. (II)

An epicentre at about 40°5N. 143°5E. would suit the recorded Tokyo observations (P = +1m.27s., S = +2m.40s.) in each case, as also Mizusawa and De Bilt, but would not suit Osaka and Kobe, and would make the negative residual for Zi-ka-wei still larger.

$$A = -638, B = +481, C = +602; D = +602, E = +799; \\ G = -481, H = +362, K = -799.$$

73

1918. June 4d. 17h. 11m. 36s. Epicentre 19°0S. 177°0W.

A = - .944, B = - .049, C = - .326 ; D = - .052, E = + .999 ;
 G = + .325, H = + .017, K = - .946.

The median residual for the antipodal stations is [+12], which seems to be partly due to error in T_0 , and partly to the focus being rather higher than usual. But the quantities are small and no correction has been ventured.

NOTES TO JUNE 7d. 21h. 27m. 6s.

Additional records : Berkeley gives $T_0 = 21h.26m.53s.$ Ann Arbor $T_0 = 21h.25m.48s.$ Cheltenham $P\bar{E}^? = +17m.15s.$, $PN^? = +17m.25s.$ Toronto $T_0 = 21h.28m.6s.$ Victoria $T_0 = 21h.26m.27s.$ Ottawa $PR_1 = +8m.24s.$, $SR_1 = +14m.36s.$, $L = +20.9m.$, $T_0 = 21h.27m.10s.$ Harvard gives P at $26m.42s.$, and the true P as S . Also $SE = +8m.33s.$, $eE = +16m.0s.$, $P^?$ or $L = +19m.57s.$, $MN = +24.0m.$, $T_0 = 21h.16m.12s.$ La Paz $T_0 = 21h.27m.23s.$ Eskdalemuir $T_0 = 21h.27m.12s.$ Bidston $PR_1 = +15m.57s.$ Coimbra $LN = +46.9m.$, $T_0 = 21h.27m.22s.$ Uccle $T_0 = 21h.27m.30s.$ De Bilt $eSR_1N = +29m.6s.$, $eSR_1E = +29m.11s.$, $eSR_2 = +33m.19s.$, $T_0 = +21h.27m.32s.$ Barcelona $M = +64.6m.$ Moncalieri $MN = 55.0m.$ Pola $MN = +67.8m.$ Zagreb $MNW = +59.9m.$ Rocca di Papa $L = +59.6m.$ Riverview $MN = +69.2m.$

June 7d. Records also at 1h. (San Fernando), 6h. (Rio Tinto), 7h. (Zagreb), 9h. (Tacubaya), 10h. (Algiers), 11h. and 12h. (La Paz), 14h. (Manila and Riverview), 18h. (Zurich), 23h. (Athens).

June 8d. 20h. 13m. 12s. Epicentre $5^{\circ}0'N. 128^{\circ}0'E.$ (as on 1916 Feb. 14d. and 1916 June 9d.).

$$A = -613, B = +785, C = +087; D = +788, E = +616; \\ G = -054, H = +069, K = -996.$$

It seems possible that the Manila S is one minute in error; and perhaps both P and S of Mizusawa; but without knowledge of these points improvement of the solution is uncertain.

June 16d. Records also at 0h. (San Fernando), 1h. (La Paz), 3h. (Colombo), 4h. (La Paz, Rio Tinto, and Marseilles), 7h. (Moncalieri), 10h. (La Paz), 15h. (Batavia), 16h. and 17h. (La Paz), 18h. (San Fernando), 21h. (Colombo).

June 17d. 16h. 41m. 25s. Epicentre $42^{\circ}5N$. $85^{\circ}5W$.

$$A = +058, B = -735, C = +676; D = -997, E = -078; \\ G = +053, H = -674, K = -737.$$

The solution is unsatisfactory in that it does not account for the records at De Bilt or Ann Arbor. But no solution satisfying all the material suggests itself, after several trials.

Additional records: Riverview gives MN = +73.6m. Victoria L = +40.4m.

The above solution is clearly defective, but will serve to show the difficulties in reconciling all the observations. There were probably at least two shocks, one of them about 38° from Honolulu at 4h.21m.20s., according to the Honolulu record. The Berkeley record would fit in with this and place the epicentre a few degrees from Berkeley, and if we adopt the position 32°.0N. 119°.0W., as on 1917 November 7, and 1915 November 21, the European records (Eskdalemuir, De Bilt, and Edinburgh) will also fit fairly well; but, in view of the complete silence of other American stations, it seems impossible to put forward this solution seriously, though we may give the figures:

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

La Paz	Bi.	138.9	116	19 50	[+12]	—	—	61.7	—

Additional records : Manila gives MN = +16.3m. Riverview PS = +11m.35s. MZ = +17.1m. T₀ = 14h.49m.6s. Melbourne S = +17m.8s. SR₁ = +17m.56s. Honolulu T₀ = 14h.46m.42s. Toronto LE = +71.4m. Ottawa eL = +59.3m. Bidston gives S as P and L as S.

The above is about the best compromise solution that can be obtained from rather refractory data. But the La Paz residual (+12s) suggests a "high focus." If we suppose a focus 0.020 above the normal and transfer the epicentre to 1°S. 154°E. (as on 1914 May 18-19), the chief observations near the epicentre would be as follows :—

$$A = -899, B = +438, C = -017.$$

	Δ	Corr. for Focus.	P.	O-C.	S.	O-C.
	°		m. s.	s.	m. s.	s.
Riverview	32.9	+1.5	7 14	+ 6	11 2	-104
Sydney	32.9	+1.5	11 8	?S	(11 8)	-98
Manila	36.3	+1.6	7 32	- 5	12 30	- 67
Melbourne	37.8	+1.6	13 8	?S	(13 8)	- 49
Osaka	39.8	+1.7	10 1	+114	—	—
Honolulu	51.9	+2.2	9 38	+ 4	17 20	+ 10

The Osaka observation may be 2min. in error, but the discordances in S for the first four stations probably represent something real, perhaps another shock from another focus.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.

These data are considered public domain and may be freely distributed or copied for non-profit purposes provided the previous references are quoted.

Riverview gives MN₁ = +39.3m. Sydney gives P = 4h.6m.0s. This determination depends entirely on the Riverview observations and the L given by Batavia. Even if these are correct the epicentre may therefore lie anywhere on an arc of a circle drawn with Riverview as centre, and distant between 30° and 40° from Batavia, but the whole uncertainty is greater still.

Original bulletins of the International Seismological Summary (ISS) have been obtained thanks to funding provided by the US National Science Foundation through grant EAR-9725140 (Villaseñor et al., 1997) and have been scanned and collected by SGA Storia Geofisica Ambiente (Bologna) thanks to funding provided by the Istituto Nazionale di Geofisica e Vulcanologia (Rome), in the frame of the EUROSEISMOS project.
