Seismic Records

at De Bilt

Volume 50

1962

De Bilt, 1968

Publicatienummer K.N.M.I. 108 - 50

P R E F A C E

This seismic Yearbook was composed under the supervision of Dr. J. Veldkamp, director of the Geophysical Section. The records have been reduced by Mr. J. Oldeman, scientific officer.

The Director in Chief of the Royal Netherlands Meteorological Institute,

Dr. M.W.F. Schregardus.

De Bilt, August 1968

## I N T R O D U C T I O N

## SEISMOLOGICAL STATION DE BILT

The geographic coordinates of the seismological station are  $52^{\circ}6'1''$  N and  $5^{\circ}10.6'$  E. The instruments are placed at a height of 3 m above mean sea-level on a subsoil consisting of sand (pleistocene).

The instruments are: a set of seismographs (two horizontal and one vertical) with galvanometric recording to GALITZIN.

THE GALITZIN SEISMOGRAPHS AT DE BILT. Below are given: the period of the galvanometer  $T_1$ , the reduced pendulum length  $l$ , the distance  $A_1$  between the mirror of the galvanometer and the recording paper, and the rough values for the natural period of the undamped pendulum  $T$ , of the damping constant and of the multiplying factor  $k$  for the year 1962.

	NS comp.	EW comp.	Z comp.
Period of galvanometer $T_1$	24.43 sec	24.96 sec	12.0 sec
Reduced length of pendulum $l$	123 mm	123 mm	406 mm
Distance $A_1$	1380 mm	1380 mm	1380 mm
Period of pendulum $T$	25 sec	25 sec	12 sec
Damping constant	0.0	0.0	0.0
Multiplying factor $k$	11.0	11.0	175

## SEISMOLOGICAL STATION HEERLEN

The geographic coordinates of the seismological station are:  $55^{\circ}53'0''$  N and  $5^{\circ}59'0''$  E.

The instrument, a horizontal seismograph,  $M = 450$  kg, is placed at a height of 100 m above mean sea-level on a subsoil consisting of loess.

The mean values of the constants for the year 1962 are:

T	E	V	V max.	T max.
2	3	400	600	2

## SEISMOLOGICAL STATION WITTEVEEN

The geographic coordinates of the seismological station are:  $52^{\circ}48'8''$  N and  $6^{\circ}40'1''$  E.

The instrument, a GRENET vertical seismograph with galvanometric record, is placed at a height of 2 m above mean sea-level on a subsoil consisting of pleistocene sand.

The period of the seismograph is 2.3 sec, the period of the galvanometer is 0.8 sec. The maximum amplification is 6500 for a period of about 1 sec.

Seismic Records at De Bilt

## EXPLANATION OF THE TABLES

The data given in this Yearbook have mostly been obtained from the GALITZIN records. The velocity of the recording paper is 30 mm per minute, allowing a good time-accuracy.

In a few cases the data from the seismograph at Heerlen are mentioned. The time is Greenwich mean time.

In the column "direction" + means an upward movement of the soil (compression), - means a downward movement (dilatation). Uncertain data have been given in parentheses. The following symbols were used for the phases.

P	= normal first phase, or first longitudinal tremor.
pP	= P-wave once reflected at the earth's surface near the epicentre.
PP	= P-wave reflected halfway between epicentre and station.
PPP	= P-wave two times reflected at the earth's surface.
PPPP	= P-wave three times reflected.
S	= second phase, arrival of the transversal tremor.
SS	= S-wave reflected at the earth's surface near the epicentre.
PS	= wave changed from longitudinal to transversal oscillation through reflection at the earth's surface.
PPS	= wave twice reflected, having been transversal on one branch of the path.
SS	= S-wave reflected halfway between epicentre and station.
SSS	= S-wave two times reflected at the earth's surface.
SSSS	= S-wave three times reflected at the earth's surface.
PcP	= P-wave reflected at the core boundary.
ScS	= S-wave reflected at the core boundary.
P'	= PKP = wave having penetrated the core.
S'	= SKS = transversal wave, having been longitudinal within the core.
PKS	= alternating wave having penetrated the core.
pP'	= P'-wave reflected near the epicentre.
SS'	= S'-wave reflected near the epicentre.
SKKS	= alternating wave which has been reflected within the core.
L	= long wave or surface waves.
M	= maximum of the surface waves.
L'	= surface waves travelling around the major arc.
M'	= maximum of these waves.
i	= sudden beginning of the phase.
e	= gradual beginning of the phase.
F	= end of discernable movement.
H	= time of the shock at point of origin.
h	= depth of the origin.
△	= distance of epicentre.

The indices H, N, E and Z refer to horizontal, north-south, east-west and vertical components of the movement.

The distance of the epicentre and the depth of origin have been calculated by means of curves constructed with the aid of the time tables of Jeffreys and Bullen (1940).

The data given in the column "amplitude" are the maximal amplitudes measured from the medium line. The amplitudes have been calculated by means of the formula:

$$V = \frac{A_1 k T_b}{\pi l} \cdot \frac{1}{\left\{ 1 + \left( \frac{T_b}{T} \right)^2 \right\}^2}$$

In this formula  $A_1$  is the distance between galvanometer mirror and recording paper,  $k$  is the multiplying factor,  $T_b$  the period of the wave,  $l$  the reduced length of the pendulum,  $T$  the free period of the undamped seismograph, and  $V$  the magnification. The period of the galvanometer is assumed to be equal to the free period of the undamped seismograph.

For the horizontal components of the GALITZIN records the following mean values were used:  $k = 11,0$  and  $T = 24,5$  sec, and for the vertical component  $k = 175$  and  $T = 12,0$  sec.

Whenever it was possible the amplitudes and periods of the first P- and S-waves have been given. As the movement of these waves is irregular in general, the accuracy of these data is small. The amplitudes of the maxima of L-waves have been calculated in case of very strong earthquakes.

Seismic Records at De Bilt

## THE MICROSEISMIC ACTIVITY

The table on page 1 shows the character of the microseismic activity (see also 1915 p. 101 and 1916 p. 101) The numbers 0, 1, 2 and 3 mean:

- 0 = very weak and weak
- 1 = moderate
- 2 = strong
- 3 = very strong

For measuring the microseismic activity the records of the GALITZIN seismograph were used. The table below gives the amplitudes of the oscillations (measured from the medium line) and the corresponding amplitudes of the movement of the surface.

Character	Ampl. record	Ampl. surface
0	0 - $\frac{1}{2}$ mm	0 - $1\frac{1}{4}$ μ
1	$\frac{1}{2}$ - 2 "	$1\frac{1}{4}$ - 5 "
2	2 - 4 "	5 - 10 "
3	> 4 "	> 10 "
