THE SEISMOLOGICAL BULLETIN  
OF  
TAIWAN WEATHER BUREAU  
January–March 1955.  
VOL. 2 No. 1

臺灣省氣象所

Published by Department of Seismology,  
TAIWAN WEATHER BUREAU.

No. 64, Kung Yuan Road, Taipei, Taiwan  
China.

Geographical coordinates of the Seismological Station, Taiwan China.

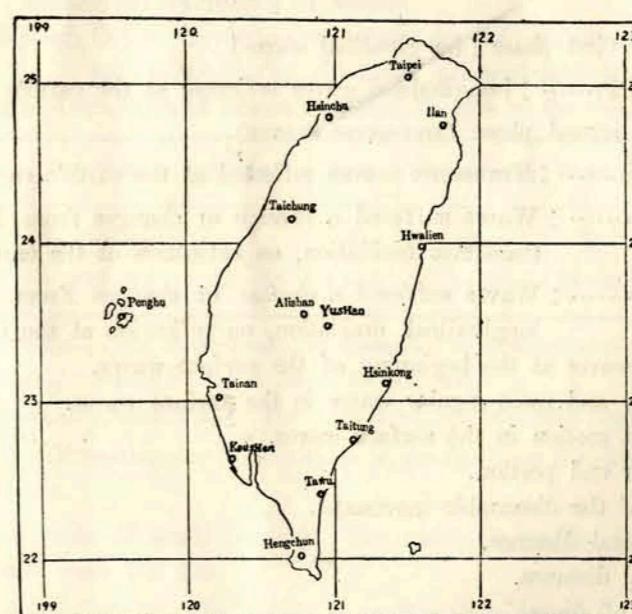

$\lambda$  : Longitude  $\varphi$  : Geographical Latitude

$\varphi'$  : Geocentric Latitude

$$a = \cos\varphi' \cos\lambda \quad b = \cos\varphi' \sin\lambda \quad c = \sin\varphi'$$

Station	$\varphi$ ;(N)	$\lambda$ ;(E)	$\varphi$	Altitude	Subsoil	a	b	c	Seismographs

Map showing the position of Seismological Station in Taiwan, China.

## Specification of instruments:-

Mass of the pendulum	M (kg)	Coefficient of friction	$\frac{r}{T_0^2}$ (mm/sec <sup>2</sup> )
Magnification	V.	Proper period of the pendulum T <sub>0</sub> (sec.)	
Damping coefficient	ε.		

The Constants of Seismographs at Taipei for the Month of January are as follows, and those constants at the other stations are nearly the same.

Seismographs	Component	M.	V.	ε.	$\frac{r}{T_0^2}$	T.
W(H) : Wiechert's horizontal seismograph	E-W	200	74	9	0.0008	5.2
W(V) : Wiechert's Vertical seismograph	N-S	200	77	9	0.0008	5.2
	U-D	80	72	8	0.009	4.2
P <sub>1</sub> : Portable seismograph (1)	E-W	18	40	10	0.005	5.1
	N-S	18	49	6	0.005	5.1
O : Omoi's horizontal seismograph	E-W	15	20	2	0.002	15.7
	N-S	15	20	2	0.003	15.1
S <sub>2</sub> : Strong motion seismograph	E-W	2	2	4	0.004	3.7
	N-S	2	2	4	0.004	3.8
	U-D	1.5	2	8	0.004	3.0
P <sub>2</sub> : Portable seismograph (2)	E-W	10	20	2	0.015	3.9
	N-S	10	20	2	0.026	4.0
	U-D	7.5	20	2	0.018	4.0
A : Acceleration Seismograph	E-W	15	220	10	0.5	0.10
	N-S	15	220	13	0.9	0.10
	U-D	15	173	6	0.9	0.08

The present publication inserts the following explanation of the notations only in the first number hereafter.

## 1. Phase.

P : Normal first phase (Longitudinal waves)

pP, PP, PPP,..... : Longitudinal waves reflected at the earth's surface.

S : Normal second phase (transverse waves).

sS, SS, SSS ..... : Transverse waves reflected at the earth's surface.

PS, PPS,..... : Waves suffered a change or changes from longitudinal to transverse oscillation, on reflection at the earth's surface.

SP, SPP,..... : Waves suffered a change or changes from transverse to longitudinal oscillation, on reflection at the earth's surface.

L : Long waves at the beginning of the surface waves.

Q : Shorter and more regular waves in the surface waves.

M : Largest motion in the surface waves.

C : Tail or end portion.

F : End of the discernible movement.

△ : Epicentral distance.

△H : Focal distance.

H : Depth of focus.

μ : Micron.

P-S : Duration of Preliminary tremor.

## 2. Nature of the motion.

i : Sudden commencement of a phase.

e : Gradual or indistinct commencement of a phase.

? : Questionable or uncertain.

## 3. Period and Initial motion.

T : Period, duration of one complete oscillation.

I : Amplitude of the true displacement of the ground from the position at rest.

I<sub>N</sub> : N-S component of I.

I<sub>E</sub> : E-W component of I.

I<sub>Z</sub> : Vertical component of I.

Displacement to the north, east and upward are regarded as positive.

## 4. Scales of seismic intensity.

The intensity of the shock is estimated according to the scales O-VI, as follows:

O, No feeling : Shocks too weak to cause human feelings, registered only by seismographs.

I, Slight : Extremely feeble shocks only felt by persons at rest or by those who are observant to an earthquake.

II, Weak : Shocks felt by most persons, slight shaking of doors and latticed sliding doors.

III, Rather strong : Slight shaking of houses and buildings, rattling of doors and latticed sliding doors, swinging of hanging objects like the electric lamps, moving of liquids in vessels.

IV, Strong : Strong shaking of houses and buildings, overturning of unstable objects spilling of liquids out of vessels.

V, Very Strong : Cracks in the walls, overturning of gravestones, stone lanterns etc., damaging of chimneys and mud-and-plaster warehouses.

VI, Disastrous : Demolition of houses landslips, fissures on the roads, the ground etc.

	No Feeling	Slight	Weak	Rather Strong	Strong	Very Strong	Disastrous
Scale	O	I	II	III	IV	V	VI
Acceleration (gal)	0.25 - 0.8	0.8 - 2.5	2.5 - 8	8 - 25	25 - 80	80 - 250	250 <

5. The magnitude of an earthquake is classified according to the radius of the felt area assumed, roughly to be a circle as follows:-

(r) Remarkable earthquake : The radius of the felt area is greater than 300 km.

(m) Moderate earthquake : The radius is smaller than 300 km. but greater than 200 km.

(s) Earthquake of small felt area : The radius is smaller than 200 km. but greater than 100 km.

(l) Local earthquake : The radius is smaller than 100 km.

- (d) Distant earthquake: The epicentral distance is greater than 300 km. from the coast of Taiwan.
6. The depth of hypocenter is as a rule expressed in terms of kilometers. If it is not determined so definitely, the following scale will be adopted.

Class	Very shallow	Shallow	Rather deep	Deep
Depth	0~30 km.	30~100 km.	100~200 km.	>200 km.

7. Geographical coordinates:

$\lambda$  : Longitude (E)       $\varphi$  ; Latitude (N)

The coordinates are been expressed in degrees with one place of decimal.

8. Time

Time is referred to Greenwich Mean Time (G. M. T.)

GENERAL ASPECT OF EARTHQUAKES.

January to March, 1955.

1) In January, the number of occurrence of earthquakes were recorded one hundred and six which ten of them were classified as felt earthquakes and the remains were the unfelt ones. The felt earthquakes in this month, one was classified as small felt area earthquakes and remains were local ones. The small felt area earthquakes occurred in Taitung district, and among those local earthquakes five were occurred in Hwalian district, three were occurred in the vicinity of Hsinkong and the last was occurred in Northern district.

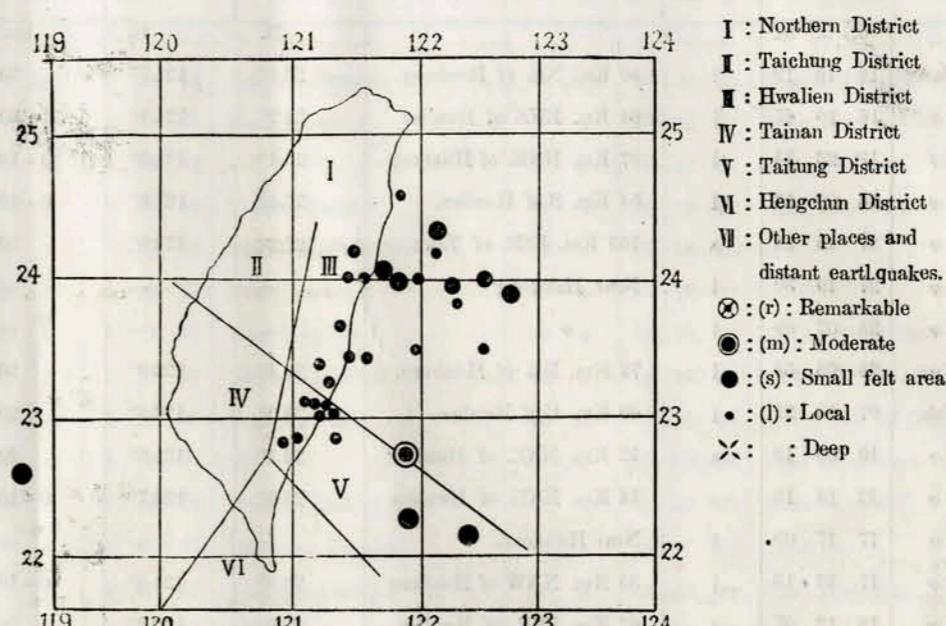

Among these unfelt earthquakes four distant earthquakes were recorded in this Island. The first was occurred in 11th at 250 km. east of Miyakozima Island. The remains were uncertain.

2) In February, the number of occurrence of earthquakes has an increase in comparison with January, and was amounted up to a figure of one hundred and twenty-eight. Among them eleven were classified as felt earthquakes and the remains were unfelt ones. Most of the felt esrthquakes inclued four small felt area earthquakes and six local earthquakes were occurred in Hwalian district, and only one local one was occurred in the vicinity of Hsinkong. Among these unfelt earthquakes three distant earthquakes were recorded; two were in 14 th and one in 27 th at the east coast of Hawaii Is.

3) In March, the number of occurrence of earthquakes were recorded one hundred and six and has a decrease in comparison with February. Among them eleven were classified as felt earthquakes and the remains were unfelt one. Among felt earthquakes one was heppened in 21 th at 46 km. ESE of Hsinkong, and four were small felt area earthquakes, which two of them occurred at Hwalian district and the other were occurred at Taitung district, and six were local one.

Nine distant earthquakes we:e recorded in Taiwan and the details in later tables.

Epicenters of Felt Earthquakes in January to March, 1955.

Number of earthquakes classified according to its magnitudes and Districts January to March, 1955.

Districts	Classification Magnitudes	Number of felt earthquakes					Number of unfelt earthquakes	Total

# THE SEISMOLOGICAL BULLETIN OF TAIWAN WEATHER BUREAU for April-June 1955 VOL. 2 No. 2

臺灣省氣象所

Published by Department of Seismology,  
TAIWAN WEATHER BUREAU.  
64. Kung Yuan Road, Taipei, Taiwan  
China.

## GENERAL ASPECT OF EARTHQUAKES

April to June 1955

4) In April, the number of earthquakes was two hundred and twenty-eight, and has a great increase in comparison to last month. Among them nineteen were classified as felt earthquakes and the rest were unfelt one.

A remarkable earthquake was happened on 4th, and its epicenter was located at 30kms SSE of Hengchun, and the depth was estimated about 5kms. Small felt area earthquakes happened in this month were four, and the local ones were twelve.

Seventeen distant earthquakes were recorded in Taiwan, the epicenter of these earthquakes, three of them were located in South Philippines and China main land respectively. Two were located 550kms ESE of Hengchun, and one was located 550kms ENE of Taipei. On 18th, we had recorded two earthquakes from Kamchatka and in Argentine. The remains were uncertain.

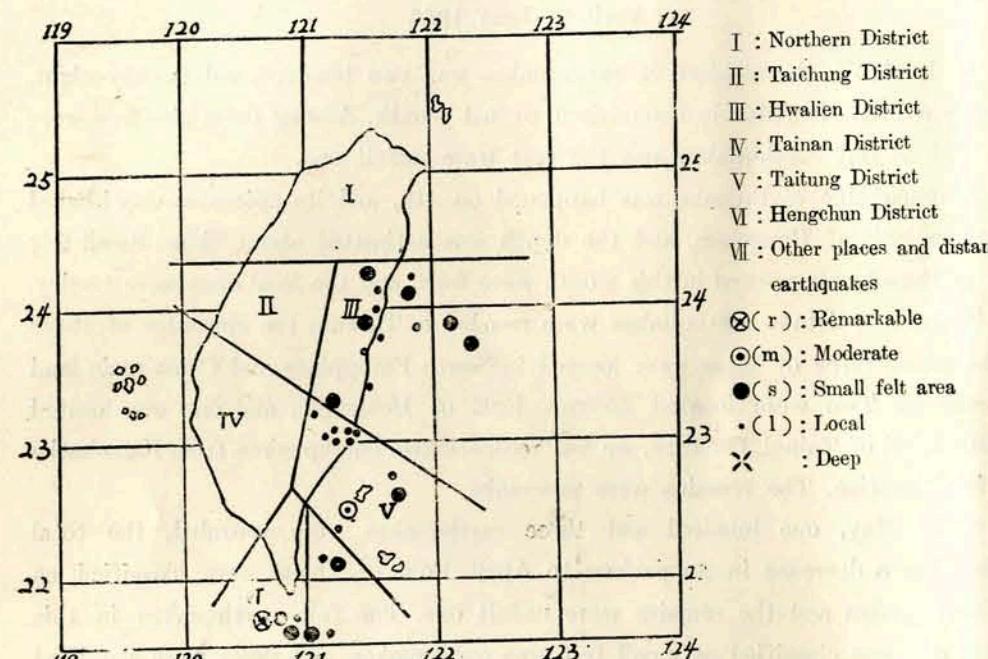

5) In May, one hundred and three earthquakes were recorded, the total number has a decrease in comparison to April. Four of them were classified as felt earthquakes and the remains were unfelt one. The felt earthquakes in this month, one was classified as small felt area earthquakes, and three were classified local earthquakes.

Ten distant earthquakes were recorded at our station, two of them occurred in Japan, and the details show in the attached tables.

6) In June, one hundred and seventy-six earthquakes were occurred in Taiwan. Among them nine were classified as felt earthquakes, and the rest were unfelt one. One moderate earthquake occurred on 17th, and its epicenter was located at 40kms ESE of Taitung, and its depth was estimated about 5kms. Four small felt earthquakes occurred in Hwalian District. Four local earthquakes were recorded, and two of them occurred in Hwalian District and the rest was located in Taitung District.

Nine distant earthquakes were recorded, two of them occurred in China main land, one in Aleutian Is., and another in Palau Is.. The rests were unknown.

## Epicenter of Felt Earthquakes in April to June, 1955.

Number of earthquakes classified according to its Magnitudes and districts, April to June 1955,

#### GENERAL ASPECT OF EARTHQUAKES

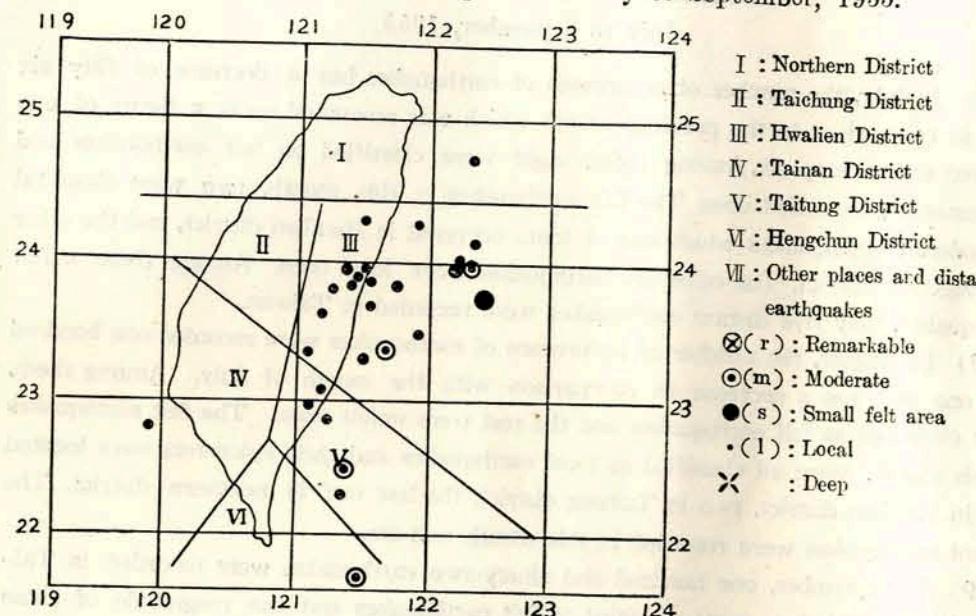

July to September, 1955

7) In July, the number of occurrence of earthquakes has a decrease of fifty six cases in comparison to the previous month which was amounted up to a figure of one hundred and seventy-six. Among them, eight were classified as felt earthquakes and the remains were unfelt ones. The felt earthquakes in this month, two were classified as moderate earthquakes which one of them occurred in Hualien district, and the other in Hengchun district. The other six earthquakes were local ones. Among these unfelt earthquakes, only five distant earthquakes were recorded in Taiwan.

8) In August, the number of occurrence of earthquakes were recorded one hundred and one and has a decrease in comparison with the month of July. Among them, eight classified as felt earthquakes and the rest were unfelt ones. The felt earthquakes in this month, were all classified as local earthquakes and their epicenters were located five in Hualien district, two in Taitung district, the last one in northern district. The distant earthquakes were recorded in this month was six.

9) In September, one hundred and ninety-two earthquakes were recorded in Taiwan. Thirteen of them were classified as felt earthquakes and the magnitude of these earthquakes two were classified as moderate ones, two as small felt area, and the remains were classified as local ones. Among those felt earthquakes, eleven were occurred in Hualien district, the rest were occurred in Taitung district. The moderate earthquakes in this month, one was happened on 22nd at 74 kms. E. of Hualien, and the other was happened on 24th at 40 km.s. SE. of Taitung and their shocks were almost felt by all in Taiwan. The distant earthquakes were recorded in this month, was eleven.

### Epicenter of Felt Earthquakes in July to September, 1955.

Number of earthquakes classified according to its Magnitude and districts July to September, 1955,

Classification Districts	Number of felt earthquakes					Number of Unfelt Earthquakes	Total
	Magnitudes Remarkable	Moderate	Small felt area	Local	Total		
Northern District	—	—	—	1	1	52	53

## THE SEISMOLOGICAL BULLETIN OF TAIWAN WEATHER BUREAU

for  
October to December, 1955.

VOL. II No. 4

臺灣省氣象所

Published by Department of Seismology  
TAIWAN WEATHER BUREAU  
64. Kung Yuan Road, Taipei, Taiwan  
China

## General Aspect of Earthquakes

October to December, 1955.

10) In October, the number of earthquakes was recorded one hundred and sixty-four occasions. Among them eleven were classified as felt earthquakes and the remains were unfelt ones. The felt earthquakes in this month, five were classified as small felt area earthquakes and the rest were local ones. Among these felt earthquakes ten were occurred in Hwalien district, only one was located in Taitung district.

There were four distant earthquakes recorded in this month, the epicenters of these earthquakes were located in Sikang province, New Britain, Solomon island, and Northern Celebes.

11) In November, Seventy-nine earthquakes were recorded and the total number has a decreases in comparison to October. Nine of them were classified as felt earthquakes, and the remains were unfelt one. One moderate earthquake occurred on 23rd, and its epicenter was located at N. 23.8 E. 122.9 and its depth was estimated about 60 kms. Another one was small felt area earthquake, it happened in 35kms SSE off coast of Hwalien. We has also recorded one earthquake from China main land on 23rd this month.

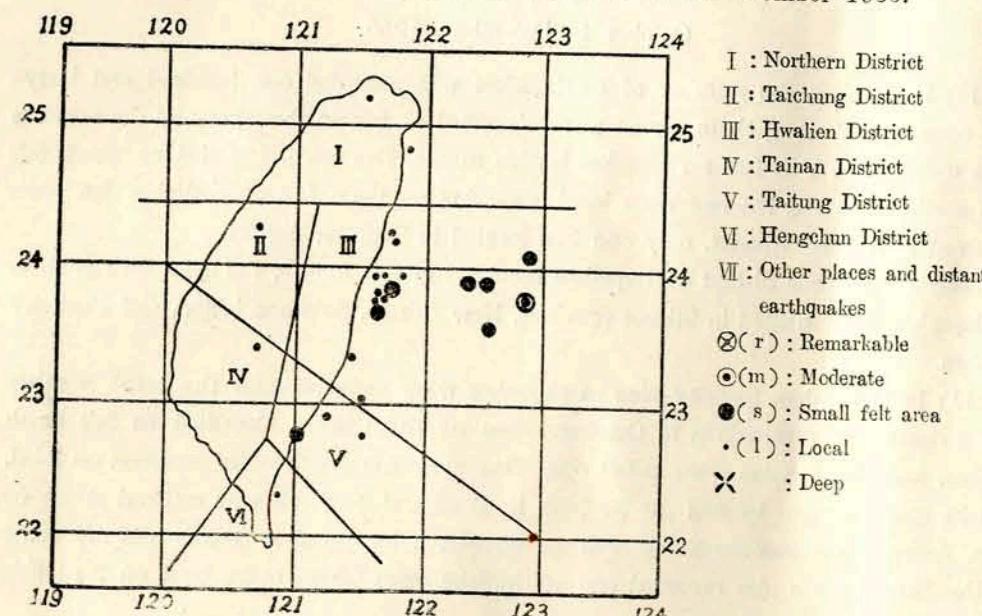

Among seven local earthquakes, two were occurred in Hwalien district, and two were happened in Taitung district, the remains were located at Northern district, Taichung district, and Hengchun district.

12) In December, seventy-seven earthquakes were occurred in Taiwan. Among them five were classified as felt earthquakes, and the rest were unfelt ones.

The felt earthquakes in this month, one was classified as small felt area earthquake, and four were classified local earthquakes.

Three distant earthquakes were recorded by our station, one of them occurred near Bonin Island, one was in the border of Pakistan and Burma, another one was near east coast of Mindanao, Philippines.

## Epicenter of Felt Earthquakes in October to December 1955.

Number of earthquakes classified according to its Magnitude and districts October to December 1955,

Classification Districts	Number of felt earthquakes					Number of Unfelt Earthquakes	Total
	Magnitudes	Remarkable	Moderate	Small felt area	Local
