THE SEISMOLOGICAL BULLETIN

OF

TAIWAN WEATHER BUREAU

January-March, 1957

VOL. IV, No. 1

臺灣省氣象所

Published by Department of Seismology,
TAIWAN WEATHER BUREAU.
No. 64, Kung Yuan Road, Taipei, Taiwan
China.

Specification of instruments:-

Mass of the the pendulum	M (kg)	Coefficient of friction	$\frac{r}{T_0^2}$ (mm/sec ²)
Magnification	V.	Proper period of the pendulum	T (sec.)
Damping coefficient	ϵ .		

The Constants of Seismographs at Taipei for the Month of January are as follows, and those constants at the other Stations are nearly the same.

Seismographs	Component	M.	V.	ϵ .	$\frac{r}{T_0^2}$	T_0
W(H): Wiechert's horizontal seismograph	E-W	200	77	9	0.004	5.1
	N-S	200	78	9	0.005	5.1
W(V): Wiechert's Vertical seismograph	U-D	80	75	8	0.003	5.1
P ₁ : Portable seismograph (1)	E-W	18	40	8	0.005	5.1
	N-S	18	40	8	0.005	5.1
O: Omori's horizontal seismograph	E-W	15	20	3	0.002	15.7
	N-S	15	20	3	0.003	15.1
S ₂ : Strong motion seismograph	E-W	2	2	4	0.004	3.8
	N-S	2	2	4	0.004	3.8
	U-D	1.5	2	8	0.004	3.5
P ₂ : Portable seismograph (2)	E-W	10	20	2	0.015	4.0
	N-S	10	20	2	0.026	4.0
	U-D	7.5	20	2	0.018	4.0
A: Acceleration Seismograph	E-W	15	220	10	0.5	0.10
	N-S	15	220	10	0.9	0.10
	U-D	15	170	10	0.9	0.08

The present publication inserts the following explanation of the notations only in the first number hereafter.

1. Phase.

P: Normal first phase (Longitudinal waves)

pP, PP, PPP,: Longitudinal waves reflected at the earth's surface.

S: Normal second phase (transverse waves).

sS, SS, SSS,: Transverse waves reflected at the earth's surface.

PS, PPS,: Waves suffered a change or changes from longitudinal to transverse oscillation, on reflection at the earth's surface.

SP, SPP,: Waves suffered a change or changes from transverse to longitudinal oscillation, on reflection at the earth's surface.

L: Long waves at the beginning of the surface waves.

Q: Shorter and more regular waves in the surface waves.

M: Largest motion in the surface waves.

C: Tail or end portion.

F: End of the discernible movement.

Δ : Epicentral distance.

ΔH : Focal distance

H: Depth of focus.

μ : Micron.

P-S: Duration of Preliminary tremor.

2. Nature of the motion.

i: Sudden commencement of a phase.

e: Gradual or indistinct commencement of a phase.

?: Questionable or uncertain.

3. Period and Initial motion.

T: Period, duration of one complete oscillation.

I: Amplitude of the true displacement of the ground from the position at rest.

I_N: N-S component of I.

I: E-W component of I.

I_Z: Vertical component of I.

Displacement to the north, east and upward are regarded as positive.

4. Scales of seismic intensity.

The intensity of the shock is estimated according to the scales O-VI, as follows:

O, No feeling: Shocks too weak to cause human feelings, registered only by seismographs.

I, Slight: Extremely feeble shocks only felt by persons at rest or by those who are observant to an earthquake.

II, Weak: Shocks felt by most persons, slight shaking of doors and latticed sliding doors.

III, Rather strong: Slight shaking of houses and buildings, rattling, of doors and latticed sliding doors, swinging of hanging objects like the electric lamps, moving of liquids in vessels.

IV, Strong: Strong shaking of houses and buildings, overturning of unstable objects, spilling of liquids out vessels.

V, Very Strong: Cracks in the walls, overturning of gravestones, etc., lanterns etc., damaging of chimneys and mud-and-plaster warehouses.

VI, Disastrous: Demolition of houses, landslips, fissures on the roads, the ground etc.

	No Feeling	Slight	Weak	Rather Strong	Strong	Very Strong	Disastrous
Scale	O	I	II	III	IV	V	VI
Acceleration (gal)	0.25-0.8	0.8-2.5	2.5-8	8-25	25-80	80-250	250<

5. The magnitude of an earthquake is classified according to the radius of the felt-area assumed, roughly to be a circle as follows:-

(r) Remarkable earthquake: The radius of the felt area is greater than 300 km.

(m) Moderate earthquake: The radius is smaller than 300 km. but greater than 200 km.

(s) Earthquake of small felt area: The radius is smaller than 200 km. but greater than 100 km.

(l) Local earthquake: The radius is smaller than 100 km.

- (d) Distant earthquake: The epicentral distance is greater than 300 km. from the coast of Taiwan.
6. The depth of hypocenter is as a rule expressed in terms of kilometers. If it is not determined so definitely, the following scale will be adopted.
- | | | | | |
|-------|--------------|------------|-------------|----------|
| Class | Very shallow | Shallow | Rather deep | Deep |
| Depth | 3~30 km. | 30~100 km. | 100~200 km. | >200 km. |
7. Geographical coordinates:
 λ : Longitude (E) ϕ : Latitude (N)
 The coordinates are been expressed in degrees with one place of decimal
8. Time
 Time is referred to Greenwich Mean Time (G. M. T).

GENERAL ASPECT OF EARTHQUAKES.
 January to March, 1957

In January, the number of occurrence of earthquakes was amounted up to a figure of ninety-six. Seven of them were classified as felt earthquakes and the remains were unfelt ones. Among these felt earthquakes, six were classified as local earthquakes, and one occurred at Hwalien was calssified as small felt area earthquakes. Among the local earthquakes, three occurred at Hwalien, two near Taitung and one near Tainan.

Seven distant earthquakes were recorded in this month and four of them were centered at Aleutien Fox Islands, one near Southren Manchuria, and the remains two were unknown.

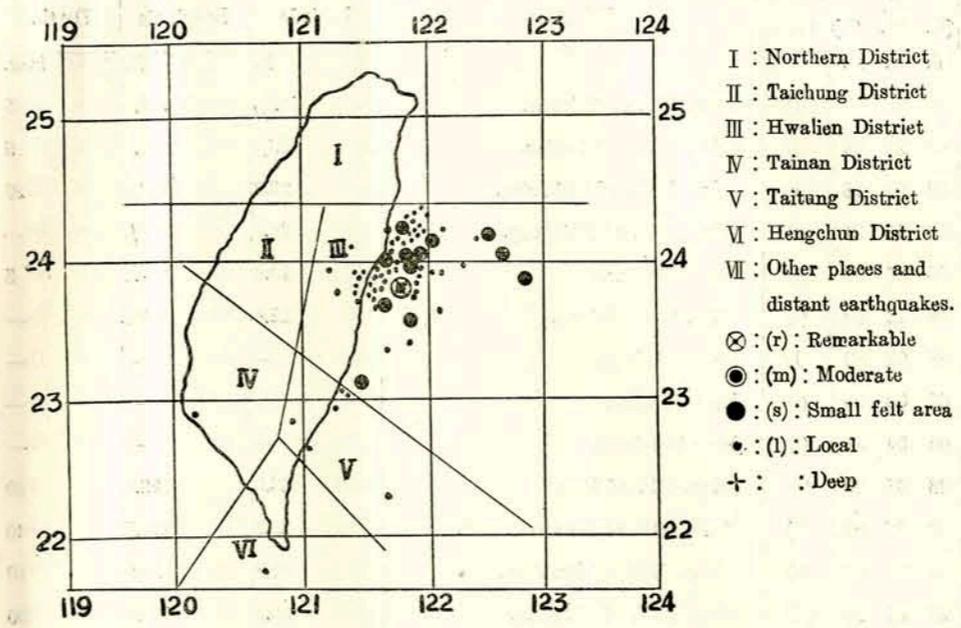

In February, three hundred seventy-four earthquakes were occurred in Taiwan, Among them forty-seven were classified as felt earthquakes, and the rest were unfelt ones. Among these felt earthquakes one was considered as a remarkable earthquake which occurred at 23.8 N. 121.8., nine were classified as small felt area earthquakes. they were all happened to be at Hwalien district. Thirty-seven earthquakes were classified as local felt shocks and they all occurred at Hwalien district too.

Seven tistant earthquakes were recorded at Taiwan, five epicenters were located near Philippines Mindanao Islands, and one was located near Kamchatka (54 N. 159 E.) and the remains unknown.

In March, two hundred and twenty-seven earthquakes were recorded seventeen of them were classified as felt earthquakes and the remains were unfelt ones. Among these felt earthquakes, two of them were classified as small area earthquakes and their epicenters were located at Hwalien. The rest were classified as local earthquakes, eleven of them were centered near Hwalien, three near Taitung and one near Hengchun.

Twenty distant earthquakes were recorded. Eighteen of their epicenters were located in Aleutian Islands, onein Sumatra, and the other one in Bards sea.

Epicenters of Felt Earthquakes in January to March, 1957

Number of earthquakes classified according to its magnitudes and Districts January to March, 1957

GENERAL ASPECT OF EARTHQUAKES

April to June, 1957.

In April, the number of earthquakes was one hundred and twenty-one, and has a decrease in comparison to the last month, among them seven were classified as felt earthquakes and the rest were unfelt ones.

Four small felt area earthquakes happened in this month and the local ones were three.

Thirteen distant earthquakes were recorded in Taiwan, Their epicenters were located in New Guinea, Japan, Lile Kodiak, West Java sea, Fox Island, Turkey and Mindanao respectively and the remains were unknown.

In May, one hundred and three earthquakes were recorded, the total numer has a little decrease in comparison to April. Ten of them were classified as felt earthquakes and the remains were unfelt ones. One moderate earthquake occurred on 20th, its epicenter was located at 24.8 N. 124.2E.. And four of them were classified as felt area earthquakes and five were classified as local ones.

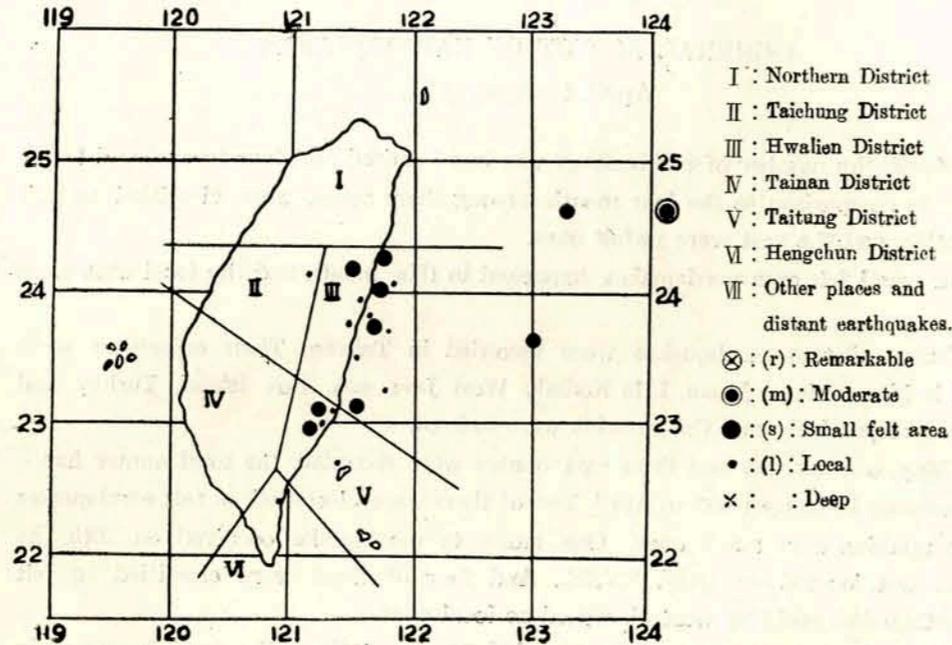

Eight distant earthquakes were recorded at our stations, thy were happened in Flores sea, Sumar P. I. West new Guinea, Chinghai province, Java, Mariana Island, Turkey, and Burma-Pakistan Border respectively.

In June, ninety-seven earthquakes were occurred in Taiwan. Among them seven were classified as felt earthquakes, and the rest were unfelt one.

Among these felt earthquakes six were classified as local earthquakes, and the rest was small felt area ones.

Fourteen distant earthquakes were recorded, their epicenters were located in Molucca Passage, Sumbawa Island, Luzon, Japan, Aleutain, Burma, and Mariana respectively.

Epicenters of Felt Earthquakes in April to June, 1957

地震季報

第四卷 第三號

中華民國四十六年七、八、九月

THE SEISMOLOGICAL BULLETIN

OF

TAIWAN WEATHER BUREAU

for

July-September 1957.

VOL. 4, No. 3

臺灣省氣象所

Published by Department of Seismology,

TAIWAN WEATHER BUREAU.

64, Kung Yuan Road, Taipei, Taiwan

China.

GENERAL ASPECT OF EARTHQUAKES

July to September, 1957.

In July, the number of occurrence of earthquakes was amounted up to a figure of one hundred and six, and has an increase in comparison to the month of June. Among them, eleven were classified as felt earthquakes and the remains were unfelt ones. Among these felt earthquakes, one was classified as remarkable earthquakes, its epicenter was estimated at 245N.122.6 E. And one was classified Moderate earthquakes, and its epicenter was reported at 225 N. 122.4 E. And the remains were local earthquakes.

Seven distant earthquakes were recorded by the seismographs in this month. They were occurred in India-Burma Border, Northern Iran Batan Is., Tonga Is. region, Kermadec Is., Aleutian, Mexico respectively.

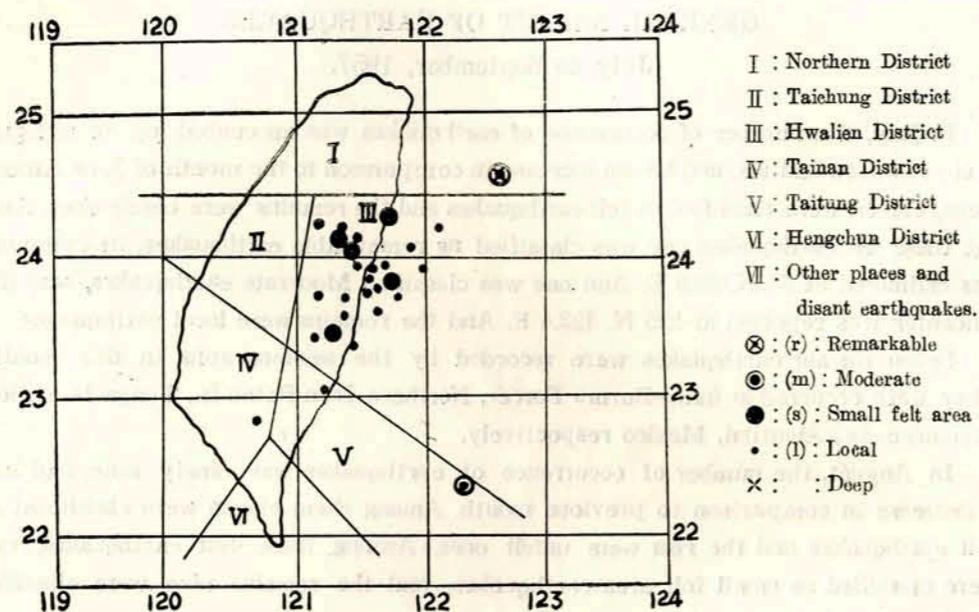

In August, the number of occurrence of earthquakes was ninety nine. and has a decrease in comparison to previous month. Among them eleven were classified as felt earthquakes and the rest were unfelt ones, Among these felt earthquakes, two were classified as small felt area earthquakes, and the remains nine were classified local earthquakes.

Six distant earthquakes recorded at Taiwan in this month, Their epicenters were reported at New Guinea, Alebes sea, Philippines Is., New Britain, Batan Is., Respectively.

In September, eighty-one earthquakes were recorded, seven of them were classified as felt earthquakes and the remains were unfelt ones, These earthquakes of felt ones, in this month one was small felt area earthquake, and the rest were classified as local earthquakes.

Seven distant earthquakes were reported at Taiwan. Among them three were. happened at Spice Is. two were occurred in Fiji Is., one in Mindanao, Philippines, and an other one was in Honshu Japan.

Epicenters of Felt Earthquakes in July to September, 1957

General, Aspect of Earthquakes
October to December 1957

10) In October, two hundred and eighty-nine earthquakes were observed, thirty-three of which were felt by body and the remains were the unfelt ones. The felt earthquakes in this month, one may be classified as remarkable and two were classified as moderate one and three were classified as small felt area ones and the rest were classified as local ones. The remarkable earthquake occurred on 19th and its epicenter was located at 23.7°N , 121.5°E , and its depth was estimated about 10 kms. Two moderate earthquakes occurred both on 25th and their epicenters were located one at 21.8°N , 122.8°E , and the other at 21.9°N , 122.2°E . Their depths were estimated one about 120 kms., and the other about 60 kms. Three small felt area earthquakes two of them occurred in Hualien and another in Tainan district. Those local earthquakes were mostly happened in Hualien district except one was happened in Tainan, one in Taichung and another in Hengchun. Two distant earthquakes recorded in this month one of them occurred on 26th, its epicenter was located near Borneo, and another occurred on 27th and its epicenter was uncertain.

11) In November, one hundred and twenty-four earthquakes were observed, seven of which felt by body were classified as local earthquakes among felt earthquakes four of them, occurred in Hualien and the remain three in, Taitung district. There were eight distant earthquakes recorded in this month two of them occurred on 10th. One of the epicenters was located near Solomon Islands, the other near southern coast of Honshu, and the remains were uncertain.

12) In December, one hundred and nine earthquakes were observed in Taiwan. among them nine were classified as felt earthquakes and the remains were unfelt ones. The felt earthquakes in this month, one of them was classified as small felt area earthquake which occurred on 6th, its epicenter was located at 23.5°N , 121.7°E , and its depth was estimated about 30 kms. The remains were classified as local ones. There were eight distant earthquakes observed in this month in Taiwan. Among them four were recorded as conspicuous. They happened on the date of 4th, 13th, 17th, and 30th. Their epicenters were located at outer Mongolia, Iran, south of Marshall Islands region, and north coast of Luzon.

Epicenters of Felt Earthquakes in October to December, 1957.

Number of earthquakes classified according to it's magnitudes and districts October to Dcember, 1957.

District	Classification Magnitudes	Number of felt earthquakes				Total	Number of unfelt earthquakes	Total
