The present publication inserts the following explanation of the notations only in the first number hereafter.

**1. Phase.**

P : Normal first phase (Longitudinal waves)

pP, PP, PPP,.....: Longitudinal waves reflected at the earth's surface.

S : Normal second phase (transverse waves).

sS, SS, SSS,.....: Transverse waves reflected at the earth's surface.

PS, PPS, .....: Waves suffered a change or changes from longitudinal to transvers oscillation, on reflection at the earth's surface.

SP, SPP,.....: Waves suffered a change or changes from transverse to longitudinal oscillation, on reflection at the earth's surface.

L : Long waves at the beginning of the surface waves.

Q : Shorter and more regular waves in the surface waves.

M : Largest motion in the surface waves.

C : Tail or end portion.

F : End of the discernible movement.

Δ : Epicentral distance.

ΔH: Focal distance.

H : Depth of focus.

μ : Micron.

P-S : Duration of Preliminary tremor.

**2. Nature of the motion.**

i : Sudden commencement of a phase.

e : Gradual or indistinct commencement of a phase.

? : Questionable or uncertain.

**3. Period and Initial motion**

T : Period, duration of one complete oscillation.

I : Amplitude of the true displacement of the ground from the position at rest.

I<sub>N</sub> : N-S component of I.

I<sub>E</sub> : E-W component of I.

I<sub>Z</sub> : Vertical component of I.

Displacement to the north, east and upward are regarded as positive.

**4. Scales of seismic intensity.**

The intensity of the shock is estimated according to the scales O-VI, as follows:

O : No feeling: Shocks too weak to cause human feelings, registered only by seismographs.

I : Slight: Extremely feeble shocks only felt by persons at rest or by those who are observant to an earthquake.

II : Weak: Shocks felt by most persons, slight shaking of doors and latticed sidding doors.

III : Rather strong: Slight shaking of houses and buildings, rattling of doors and latticed sliding doors, swinging of hanging objects like the electric lamps, moving of liquids in vessels.

IV : Strong: Strong shaking of houses and buildings, overturning of unstable objects spilling of liquids out of vessels.

V : Very Strong: Cracks in the walls, overturning of gravestones, etc., lanterns etc., damaging of chimneys and mud-and-plaster warehouses.

VI : Disastrous: Demolition of houses landslips, fissures on the roads, the ground etc.

Scale Acceleration(gal)	No Feeling	Slight	Weak	Rather Strong	Strong	Very Strong	Disastrous
< 0.8	O	I 0.8-2.5	II 2.5-8	III 8-25	IV 25-80	V 80-250	VI 250<

5 The magnitude of an earthquake is classified according to the radius of the felt area assumed, roughly to be a circle as follows:-

- (r) Remarkable earthquake: The radius of the felt area is greater than 300 km.

(m) Moderate earthquake: The radius is smaller than 300 km. but greater than 200 km.

(s) Earthquake of small felt area: The radius is smaller than 200 km. but greater than 100 km.

(1) Local earthquake: The radius is smaller than 100 km.

(d) Distant earthquake: The epicentral distance is greater than 300 km. from the coast of Taiwan.

6. The depth of hypocenter is as a rule expressed in terms of kilometers. If it is not determined so definitely, the following scale will be adopted.

Class	Very shallow	Shallow	Rather deep	Deep
Depth	0~30km.	30~100km.	100~200 km.	>200km.

7. Geographical coordinates:  
 $\lambda$ : Longitude (E)       $\varphi$ : Latitude (N)  
 The coordinates are been expressed in degrees with one place of decimal.

8. Time

Time is referred to Greenwich Mean Time (G.M.T.)

### *General Aspect Earthquakes January to March, 1962*

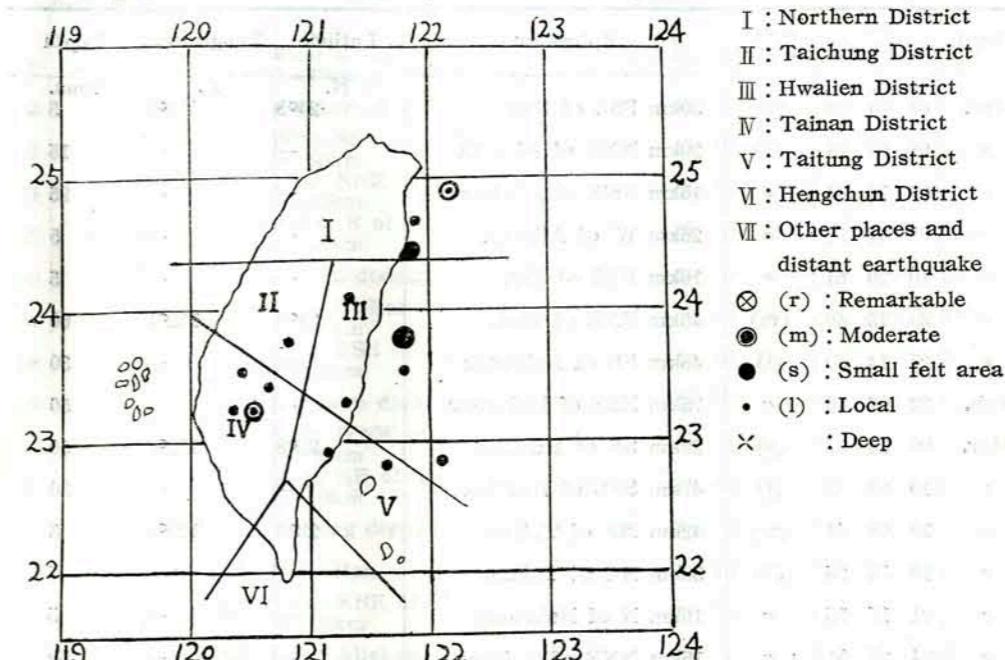

During the month of January, about one hundred and five earthquakes had been recorded in Taiwan. Among them seven quake were listed in the classification of felt earthquakes and the remains were unfeet ones. A moderate earthquake had happened on the date of 24th of January. Its epicentre was located at about 45kms ENE of Ilan. Another small felt area earthquake was recorded on the 4th with its epicentre at 30 kms SSE. of Ilan. Five local earthquakes had been traced out from seismograms, one of which was located in Taichung district. Other local earthquakes had been reported in Tainan and Taitung district on different date. One distant earthquake had been recorded in this month. Its epicenter was located near Shikoku Japan on the 4th of January.

In February the occurrence of earthquakes was counted to a number of sixty three which shows the minimum of the season. One local earthquake had occurred at ESE of Hsinkong with a distance of 75kms. The rest were unfelt earthquakes included with four distant earthquakes.

During the month of March, one hundred twenty earthquakes had been recorded. According to their classification, seven shocks were considered as felt earthquakes, and the others were unfelt shocks including seven distant earthquakes. A moderate earthquake located at about 42kms. to NE of Tainan had happened on the 10th of March. Another small felt area earthquake had also encountered on the 6th. Its epicentre was located at about 29 kms to SE of Hwalian. The remains were all considered to be the felt earthquakes of local character.

The seismograms had shown eleven distant earthquakes in the month of march. Two epicentres had been located around Ryukyu Is. on the date of the 1st and 16th of the month. Another two distant earthquakes happened on the date of 21st and 22nd, their epicenters had been found in Java Sea. The epicentres of another four distant earthquakes had been extrapolated around Mariana Is., at east coast of Mineanao P.I. in Kwangtung, China and at North coast of New Guinea with reference to the date of 7th, 11th, 18th and 22nd of the month. The epicenters of other distant earthquakes were still unknown.

Epicenters of Felt Earthquakes January to March, 1963

**Number of earthquakes classified according to it's magnitude and  
districts January to March 1962**

Classification Districts	Magnitudes Remark able	Number of felt earthquakes				Number of unfelt earthquakes	Total
		Moderate	Small felt area	Local	Total

## SEISMOLOGICAL BULLETIN

April to June, 1962

VOL. IX No. 2

臺灣省氣象所

PUBLISHED QUARTERLY BY

TAIWAN WEATHER BUREAU

64 KUNG YUAN ROAD, TAIPEI, TAIWAN, CHINA

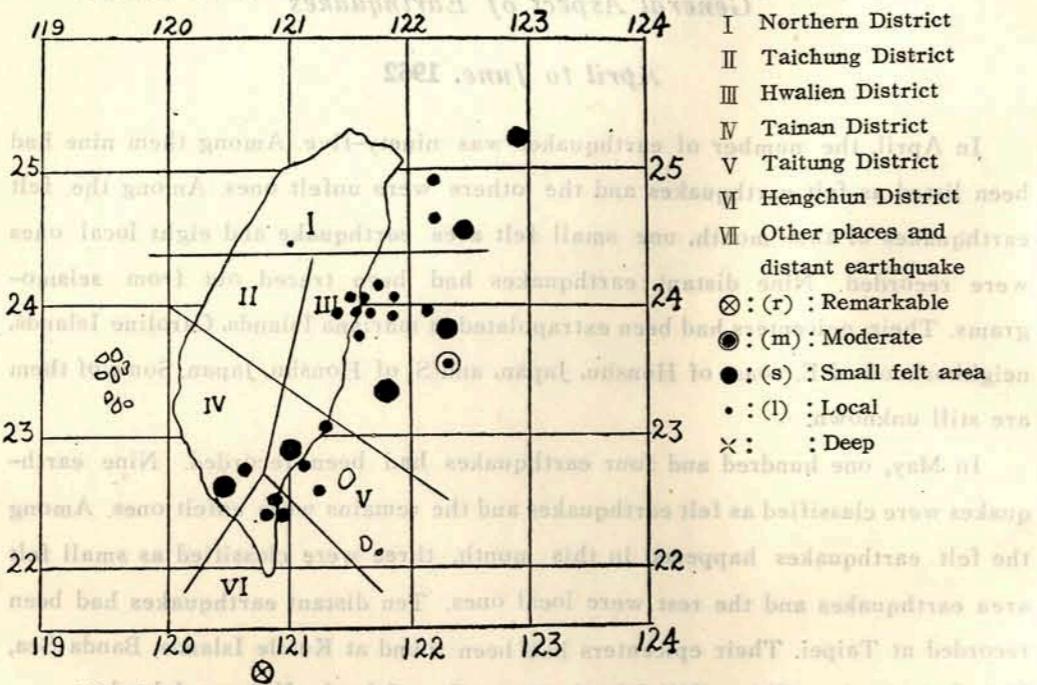

*General Aspect of Earthquakes**April to June, 1962*

In April, the number of earthquakes was ninety-five. Among them nine had been listed as felt earthquakes and the others were unfelt ones. Among the felt earthquakes of this month, one small felt area earthquake and eight local ones were recorded. Nine distant earthquakes had been traced out from seismograms. Their epicenters had been extrapolated at mariana Islands, Caroline Islands, neighborhood of E. coast of Honshu, Japan, and S. of Honshu, Japan. Some of them are still unknown.

In May, one hundred and four earthquakes had been recorded. Nine earthquakes were classified as felt earthquakes and the remains were unfelt ones. Among the felt earthquakes happened in this month, three were classified as small felt area earthquakes and the rest were local ones. Ten distant earthquakes had been recorded at Taipei. Their epicenters had been found at Kurile Islands, Banda Sea, Chinghai province China, Fiji Islands ,Santa Cruz Islands, Volcano Islands...

In June, one hundred and nine earthquakes had been recorded in Taiwan. Among them nine were classified as felt earthquakes and the others were unfelt ones. One remarkable earthquake had haqpened on 23rd of this month. Its epicenter was located at about 310kms. To the SSE. of Hengchun. The focal depth of this shock was estimated at a depth of 120 kms. Another moderate earthquake also had happened on 25th June. Its epicenter was located at about 90 kms. to the ESE of Hwalien. Its focal depth was about 5 kms. Two small felt area felt earthquakes had been registered and the remains were local ones. Six distant earthquakes had been traced out from seismograms. Three of them their epicenters had been located at Ryukyu Islands, and in Yunnan province the southwestern part of China.

## Epicenters of Felt Earthquakes in April to June 1962

Number of earthquakes classified according to it's magnitude and districts April to June 1962

## SEISMOLOGICAL BULLETIN

July to September 1962

VOL. IX No. 3

臺灣省氣象所

PUBLISHED QUARTERLY BY

TAIWAN WEATHER BUREAU

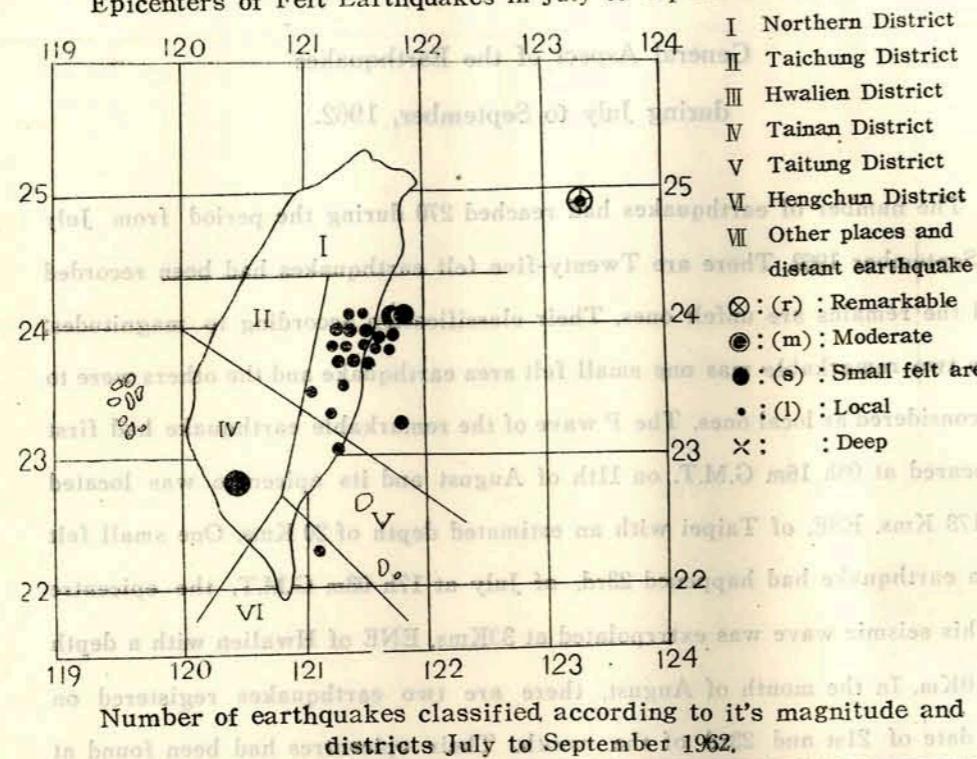

64 KUNG YUAN ROAD, TAIPEI, TAIWAN, CHINA

## General Aspect of the Earthquakes

during July to September, 1962.

The number of earthquakes had reached 270 during the period from July to September 1962. There are Twenty-five felt earthquakes had been recorded and the remains are unfelt ones. Their classification according to magnitudes; was two remarkable was one small felt area earthquake and the others were to be considered as local ones. The P wave of the remarkable earthquake had first appeared at 08h 16m G.M.T. on 11th of August and its epicentre was located at 173 Kms. ESE. of Taipei with an estimated depth of 20 Kms. One small felt area earthquake had happened 23rd. of July at 17h 03m G.M.T. the epicentre of this seismic wave was extrapolated at 30Kms. ENE of Hwalian with a depth of 10Km. In the month of August, there are two earthquakes registered on the date of 21st and 23rd of the month. Their epicentres had been found at 16Kms. NE. of Hwalian and 30Kms. NNE of Kaohsiung respectively. Twenty-one local earthquakes had been traced out from the seismograms the locations of these earthquakes are believed in Hwalian district. The amount of distant earthquakes was twenty. Their initial motion, maximum amplitudes and periods of these seismic waves are listed in the later part of the bulletin.

Epicenters of Felt Earthquakes in July to September 1962.

Felt earthquakes in the month of July to September 1962.

## SEISMOLOGICAL BULLETIN

October to December 1962

VOL. IX No. 4

臺灣省氣象所

PUBLISHED QUARTERLY BY

TAIWAN WEATHER BUREAU

64 KUNG YUAN ROAD, TAIPEI, TAIWAN, CHINA

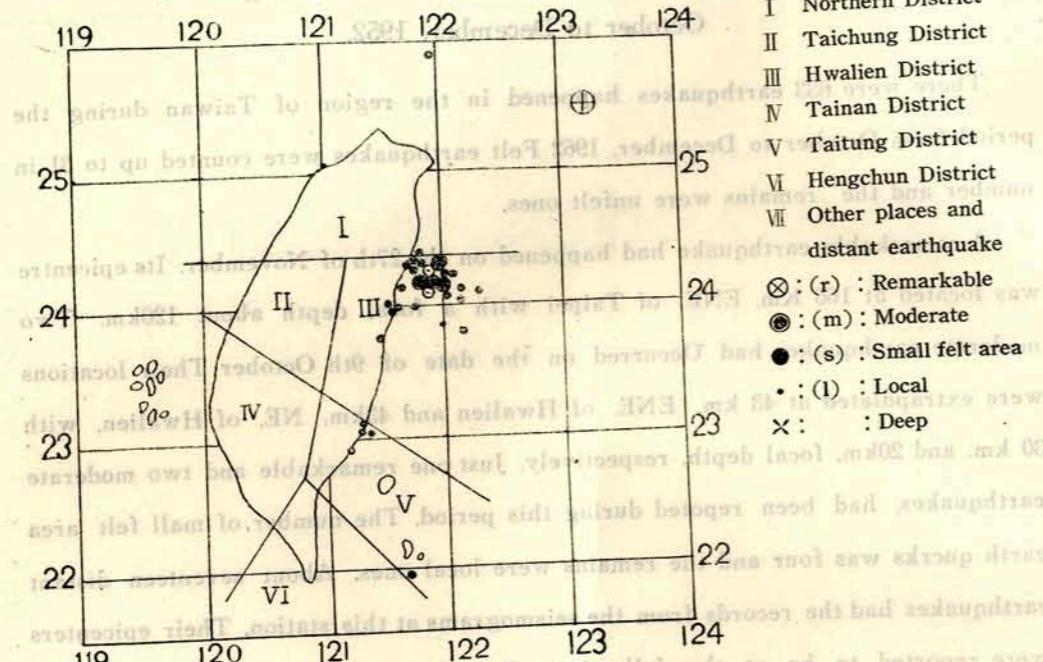

## General Aspect of the Earthquakes during

October to December, 1952.

There were 633 earthquakes happened in the region of Taiwan during the period from October to December, 1962. Felt earthquakes were counted up to 31 in number and the remains were unfelt ones.

A remarkable earthquake had happened on the 27th of November. Its epicentre was located at 166 Km. ENE. of Taipei with a focal depth about 120km. Two moderate earthquakes had occurred on the date of 9th October. Their locations were extrapolated at 43 km. ENE. of Hwalien and 43km. NE. of Hwalien, with 30 km. and 20km. focal depth. respectively. Just one remarkable and two moderate earthquakes, had been reported during this period. The number of small felt area earth quakes was four and the remains were local ones. About seventeen distant earthquakes had the records from the seismograms at this station. Their epicenters were reported to be at the following places: Bismarck Sea, Molucca Paosage, Ryukyu Islands, Andaman Islands, Central China, Bonin Islands, Celebes Sea, Ningsia province of China, neighbouring place of south coast of Hokkaido Japan, Komandorskic Islands, and west coast of southern Honshu Japan.

## Epicenters of Felt Earthquakes in October to December 1962

Number of earthquakes classified according to its magnitude and districts October to December 1962
