SEISMOLOGICAL BULLETIN

Janunry to March, 1963

VOL. X No. 1

臺灣省氣象所

PUBLISHED QUARTERLY BY

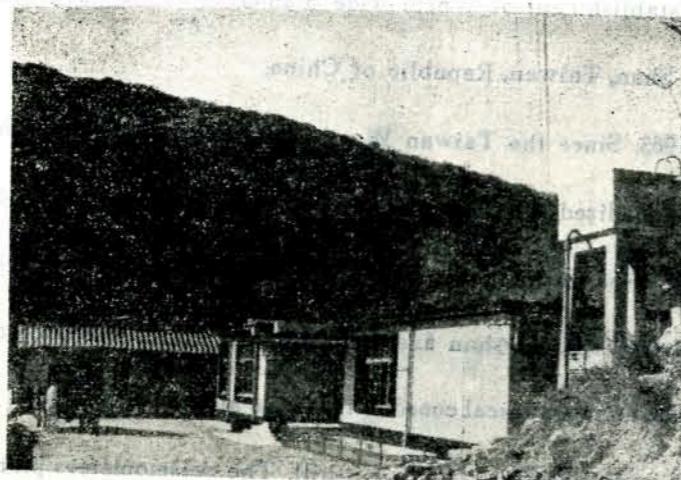

TAIWAN WEATHER BUREAU

64 KUNG YUAN ROAD, TAIPEI, TAIWAN, CHINA

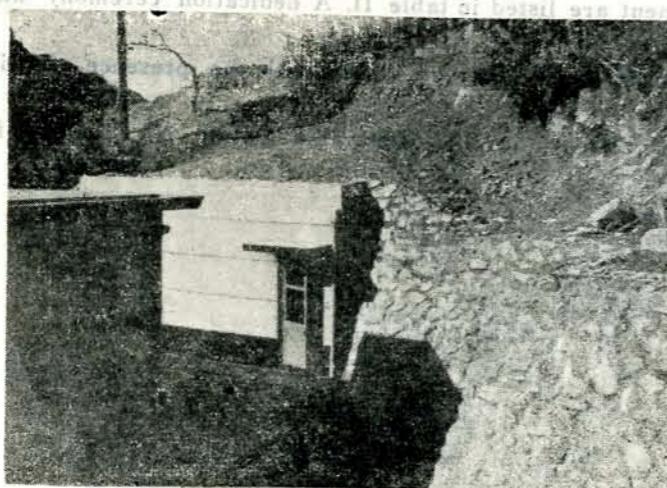

The New Establishment of World-wide Standardized Seismograph Station at
Anpu, Yanming Shan, Taiwan, Republic of China.

In March, 1963. Since the Taiwan Weather Bureau participated the Project of World-wide Standardized Seismograph Network of U.S. Coast and Geodetic Survey, Anpu had been chosen for the site of this new establishment. The station is located in a saddle between Tatung-shan and Chihsing-shan at a distance about 15 Kms north of Taipei. Its geographical coordinates have already been added into Table I.

The vault is in an artificial cave of a hill. The seismometers piers rest on unweathered fresh andesite which is 4.0 to 4.7 meter below the surface. The observatory is relatively isolated and the magnifications of the seismometers are SP 6,250 and LP 750. The new station has been installed with three Benioff short-period seismographs and three Sprengnether long-period seismographs. The constants of these instrument are listed in table II. A dedication ceremony had been held at the station of Anpu on March 14, 1963 with the presence of His Excellency Governor Huang Chieh and the Honorable Ralph N. Clough of the U. S. Embassy at Taipei.

General Aspect of the Earthquakes during

January to March, 1963.

There were 554 earthquakes happened in the region of Taiwan during the period from January to March 1963. Among them 54 felt earthquakes had been registered and the remains were unfelt ones.

Two remarkable earthquakes had happened on the 13th of February. Its epicenters were located at 50km. SE. and 16km. SSE. of Ilan with focal depth about 10km. and 20km. respectively. Another remarkable earthquake had happened on the 4th of March. Its epicenter was located at 16km. SSE. of Ilan with a focal depth about 5Km.

Two moderate earthquakes had occurred on the 25th February and the 10th, March. Their epicenters were extrapolated at 204km. E. of Hwalien and 19km. SSE. of Ilan respectively. The number of small felt area earthquakes was four and the remains were local ones.

About twenty-one distant earthquakes had been recorded on the seismogram at Taipei. Their epicenters were reported to be at the following places: Marian Islands, Ruykuy Islands, Eastern New Guinea, Kurle Islands, and the eastcoast or Honsnu Japan, and the rests were unknown.

Table I. Geographical coordinates of the Seismological Station, Taiwan China.

 λ : Longitude φ : Geographical Latitude φ' : Geocentric Latitude

$a = \cos \varphi' \cos \lambda, b = \cos \varphi' \sin \lambda, c = \sin \varphi'$

The present publication inserts the following explanation of the notations
by only in the first number hereafter.

1. Phase.

- P : Normal first phase (Longitudinal waves)
- pP, PP, PPP, : Longitudinal waves reflected at the earth's surface.
- S: Normal second phase (transverse waves).
- sS, SS, SSS, : Transverse waves reflected at the earth's surface.
- PS, PPS, : Waves suffered a change or changes from longitudinal to transvers oscillation, on reflection at the earth's surface.
- SP, SPP, : Waves suffered a change or changes from transverse to longitudinal oscillation, on reflection at the earth's surface.

L : Long waves at the beginning of the surface waves.

Q : Shorter and more regular waves in the surface waves.

M : Largest motion in the surface waves.

C : Tail or end portion.

F : End of the discernible movement.

Δ : Epicentral distance.

ΔH : Focal distance.

H : Depth of focus.

μ : Micron.

P-S: Duration of Preliminary tremor.

2. Nature of the motion.

i : Sudden commencement of a phase.

e : Gradual or indistinct commencement of a phase.

? : Questionable or uncertain.

3. Period and Initial motion.

T : Period, duration of one complete oscillation.

I : Amplitude of the true displacement of the ground from the position at rest.

I_N : N-S component of I.

I_E : E-W component of I.

I_z : Vertical component of I.

Displacement to the north, east and upward are regarded as positive.

4. Scales of seismic intensity.

The intensity of the shock is estimated according to the scales O-VI, as follows:

O : No feeling: Shocks too weak to cause human feelings, registered only by seismographs.

I : Slight: Extremely feeble shocks only felt by persons at rest or by those who are observant to an earthquake.

II : Weak: Shocks felt by most persons, slight shaking of doors and latticed sidding doors.

III : Rather strong: Slight shaking of houses and buildings, rattling of doors and latticed sliding doors, swinging of hanging objects like the electric lamps, moving of liquids in vessels.

IV : Strong: Strong shaking of houses and buildings, overturning of unstable objects spilling of liquids out of vessels.

V : Very Strong: Cracks in the walls, overturning of gravestones, etc, lanterns etc, damaging of chimneys and mud-and-plaster warehouses.

VI : Disastrous: Demolition of houses landslips, fissures on the roads, the ground etc.

	No Feeling	Slight	Weak	Rather Strong	Strong	Very Strong	Disastrous
Scale Acceleration'gal	O <-0.8	I 0.8-2.5	II 2.5-8	III 8-25	IV 25-80	V 80-250	VI >250

5. The magnitude of an earthquake is classified according to the radius of the felt area assumed, roughly to be a circle as follows:-

(r) Remarkable earthquake: The radius of the felt area is greater than 300 km.

(m) Moderate earthquake: The radius is smaller than 300 km. but greater than 200 km.

(s) Earthquake of small felt area: The radius is smaller than 200 km. but greater than 100 km.

(1) Local earthquake: The radius is smaller than 100 km.

(d) Distant earthquake: The epicentral pistance is greater than 300 km. from the coast of Taiwan.

6. The depth of hypocenter is as a rule expressed in terms of kilometers, If it is not determined so difinitely, the following scale will be adoqted.

Class	Very shallow	Shallow	Rather deep	Deep
Depth	0~30km.	30~100km.	100~200km.	>200km.

7. Geographical coordinates:

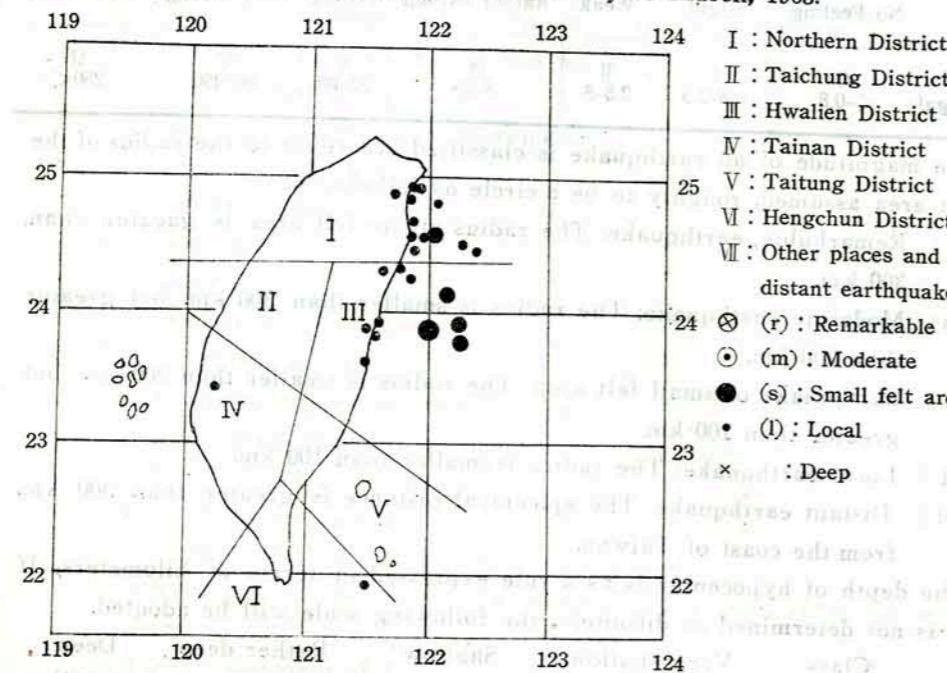

λ : Longitude (E) φ : Latitude (N)

The coordinates are been experessed in degrees with one place of decimal.

8. Time

Time is referred to Greenwich Mean Time (G.M.T.)

Epicenters of Felt Earthquakes in January to March, 1963.

Number of earthquakes classified according to its magnitude and districts January to March, 1963.

地 震 季 報

第十卷 第二號

中華民國五十二年四、五、六月

SEISMOLOGICAL BULLETIN

April to June, 1963

VOL. X No. 2

臺灣省氣象所

PUBLISHED QUARTERLY BY

TAIWAN WEATHER BUREAU

64 KUNG YUAN ROAD, TAIPEI, TAIWAN, CHINA

General Aspect of Earthquakes

From April to June, 1963

The number of earthquakes during the period from April to June 1963 was

326. It has remarkably decrease in comparison with last season. Among the 326

earthquakes, 26 were classified as felt earthquakes, included with 6 small felt area

and 20 local ones. Four small felt area earthquakes occurred in April and two

in May. The epicenters of these earthquakes had been found at those places: 32km.

SE. of Ilan, 67km. ESE. of Hwalien, 70km. ESE. of Hwalien, 50km. ENE. of

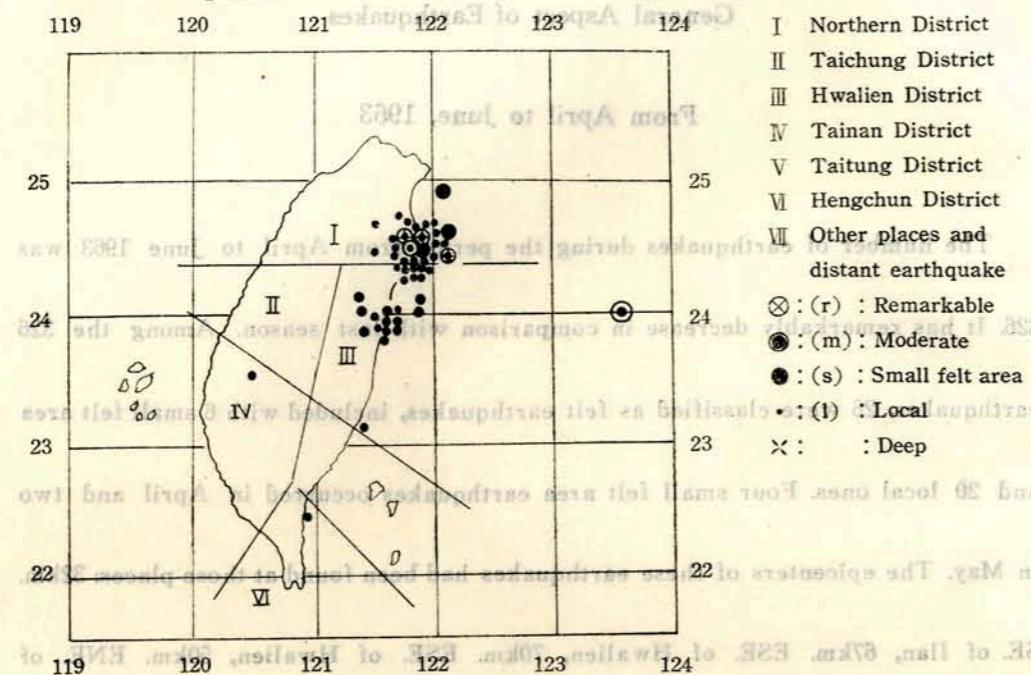

Hwalien, and 41km. ESE of Hwalien. The number of distant earthquakes recorded

by our seismographs during last three months was 19. Their initial motions,

maximum amplitudes and the periods of These seismic waves can be easily traced

out in the later part of the bulletin.

Epicenters of Felt Earthquakes in April to June 1963

Number of earthquakes classified according to its magnitude and districts April to June 1963

Districts	Classification Magnitudes	Number of felt earthquakes			Number of unfelt earthquakes	Total		
		Remarkable	Moderate	Small felt area	Local			
Northern District	—	—	—	1	11	12	62	74
Taichung District	—	—	—	—	—	7	7	
Hwalien District	—	—	—	5	7	12	169	181
Tainan District	—	—	—	—	1	1	0	1
Taitung District	—	—	—	—	1	1	38	39
Hengchun District	—	—	—	—	—	24	24	
Total	0	0	6	20	26	300	326	
Other Places	—	—	—	—	—	19	19	

The Felt Earthquakes From April to June, 1963.

No.	Month	P. (G. M. T.)	Magnitude	Epicenter	Latitude	Longitude	Depth

SEISMOLOGICAL BULLETIN

July to September 1963

VOL. X No. 3

臺灣省氣象所

PUBLISHED QUARTERLY BY

TAIWAN WEATHER BUREAU

64 KUNG YUAN ROAD, TAIPEI, TAIWAN, CHINA

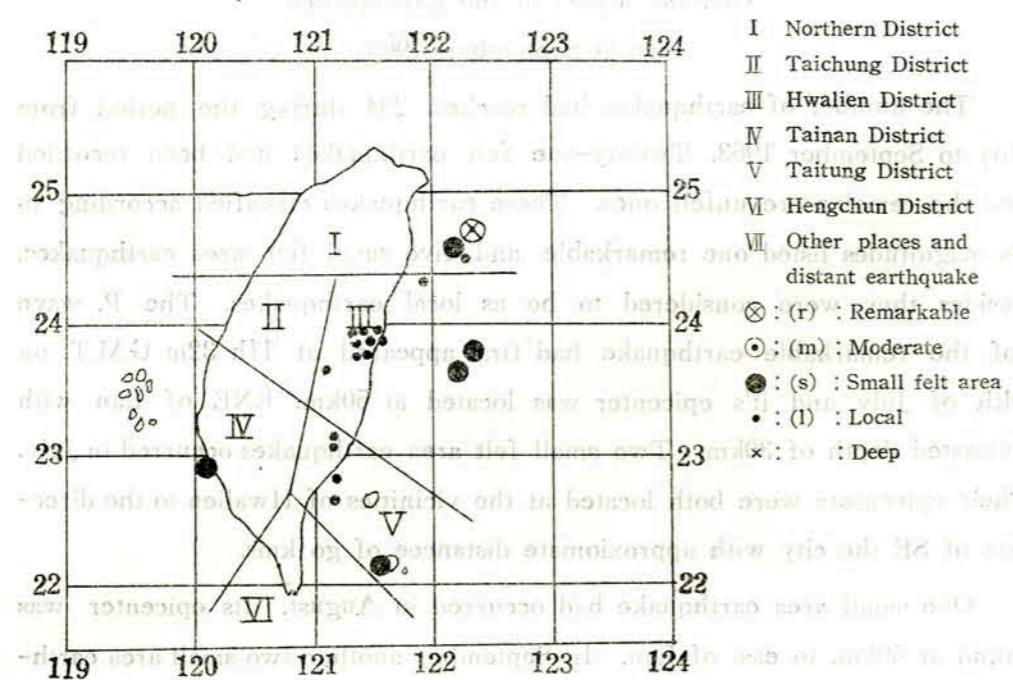

General Aspect of the Earthquakes

July to September, 1963.

The number of earthquakes had reached 294 during the period from July to September 1963. Twenty-one felt earthquakes had been recorded and the remains are unfelt ones. These earthquakes classified according to its magnitudes listed one remarkable and five small felt area earthquakes. Besides they were considered to be as local earthquakes. The P. wave of the remarkable earthquake had first appeared at 11h 32m G.M.T. on 24th of July and it's epicenter was located at 50km. ENE of Ilan with estimated depth of 30km. Two small felt area earthquakes occurred in July. Their epicenters were both located at the vicinities of Hwalien to the direction of SE the city with approxiomate distancee of go kms.

One small area earthquake had occurred in August. Its epicenter was found at 50km. to east of Ilan. In September another two small area earthquakes had been recorded. The location of the eqicenters had also been remaked. One was spotted at 66km. east of Hengchun and the another at 34km. south of Tainan. The total number of distant earthquakes during the period was eighteen. The initial motion, the maximun amplitude and the period of these seismic waves can be found from the later part of this bulletin.

Epicenters of Felt Earthquakes in July to September 1963.

Number of earthquakes classified according to its magnitude and districts July to September 1963

中華民國五十二年十、十一、十二月

SEISMOLOGICAL BULLETIN

October to December 1963

VOL. 10 No. 4

臺灣省氣象所

PUBLISHED QUARTERLY BY

TAIWAN WEATHER BUREAU

64 KUNG YUAN ROAD, TAIPEI, TAIWAN, CHINA

General Aspect of Earthquakes from October

to December 1963. *SSE* lastest 1-085

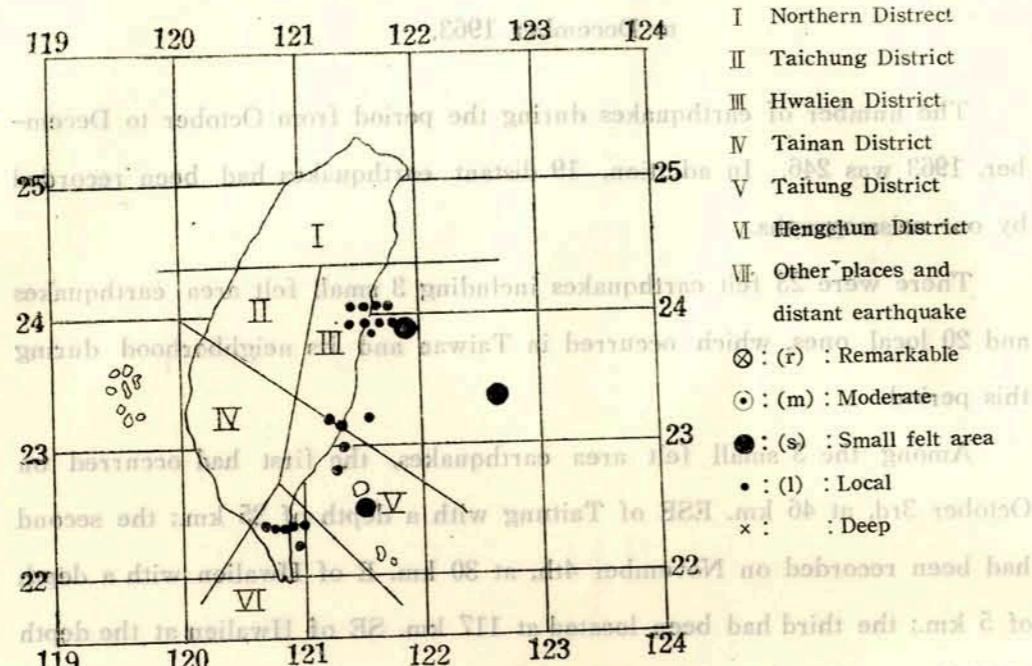

The number of earthquakes during the period from October to December, 1963 was 246. In addition, 19 distant earthquakes had been recorded by our seismographs.

There were 23 felt earthquakes including 3 small felt area earthquakes and 20 local ones, which occurred in Taiwan and its neighborhood during this period.

Among the 3 small felt area earthquakes, the first had occurred on October 3rd, at 46 km. ESE of Taitung with a depth of 35 km.; the second had been recorded on November 4th, at 30 km. E of Hwalien with a depth of 5 km.; the third had been located at 117 km. SE of Hwalien at the depth of 20 km. on the date of November 29th.

The initial motion, maximum amplitude and period of the major earthquakes including distant earthquakes are listed on the later part of this

Epicenters of Felt Earthquakes in October to December, 1963

Number of earthquakes classified according to its magnitude and districts October to December 1963
