W(H) : Wiechert's horizontal seismograph.

W(V) : Wiechert's vertical seismograph.

O : Omori's horizontal seismograph. (V:20)

 P<sub>1</sub> : C.M.O. type horizontal portable seismograph. (V:40)

 P<sub>2</sub> : Three component portable seismograph. (V:20)

 P<sub>3</sub> : Higuti-O.M.O. type short period, horizontal seismograph. (V:50)

 S<sub>1</sub> : C.M.O. type three component strong motion seismograph. (V:2)

 S<sub>2</sub> : Higuti-C.M.O. type three component strong motion seismograph. (V:1)

 A<sub>1</sub> : Ishimoto's three component acceleration seismograph.

 A<sub>2</sub> : Higuti's three component strong motion accelerometer.

Map showing the position of Seismological Station in Taiwan, China.

**Specification of instruments:-**

Mass of the pendulum M (kg) Coefficient of friction  $\frac{r}{T^2}$  (mm/sec.<sup>2</sup>)

Magnification V. Proper period of the pendulum T<sub>o</sub> (sec.)

Damping coefficient ε

The Constants of Seismographs at Taipei for the Month of January are as follows, and those constants at the other stations are nearly the same.

Seismographs	Component	M.	V.	S.	$\frac{r}{T^2}$	T <sub>o</sub>
W(H)	E-W	200	77	9	0.004	5.1
	N-S	200	78	9	0.005	5.1

	N-S	15	220	10	0.9	0.10
	U-D	15	170	10	0.9	0.08

The present publication inserts the following explanation of the notations only in the first number hereafter.

**1. Phase.**

P : Normal first phase (Longitudinal waves)

PP, PP, PPP, ..... : Longitudinal waves reflected at the earth's surface.

S : Normal second phase (transverse waves).

SS, SS, SSS, ..... : Transverse waves reflected at the earth's surface.

PS, PPS, ..... : Waves suffered a change or changes from longitudinal to transvers oscillation, on reflection at the earth's surface.

SP, SPP, ..... : Waves suffered a change or changes from transverse to longitudinal oscillation, on reflection at the earth's surface.

L : Long waves at the beginning of the surface waves.

Q : Shorter and more regular waves in the surface waves.

M : Largest motion in the surface waves.

C : Tail or end portion.

F : End of the discernible movement.

△ : Epicentral distance.

△H : Focal distance.

H : Depth of focus.

μ : Micron.

P-S : Duration of Preliminary tremor.

**2. Nature of the motion.**

i : Sudden commencement of a phase.

e : Gradual or indistinct commencement of a phase.

? : Questionable or uncertain.

**3. Period and Initial motion.**

T : Period, duration of one complete oscillation.

I : Amplitude of the true displacement of the ground from the position at rest.

I<sub>N</sub> : N-S component of I.

I<sub>E</sub> : E-W component of I.

I<sub>Z</sub> : Vertical component of I.

Displacement to the north, east and upward are regarded as positive.

**4. Scales of seismic intensity.**

The intensity of the shock is estimated according to the scales O-VI, as follows:

O, No feeling: Shocks too weak to cause human feelings, registered only by seismographs.

I. Slight: Extremely feeble shocks only felt by persons at rest or by those who are observant to an earthquake.

II. Weak: Shocks felt by most persons, slight shaking of doors and latticed sidding doors.

III. Rather strong: Slight shaking of houses and buildings, rattling of doors and latticed sliding doors, swinging of hanging objects like the electric lamps, moving of liquids in vessels.

IV. Strong: Strong shaking of houses and buildings, overturning of unstable objects spilling of liquids out of vessels.

V. Very Strong: Cracks in the walls, overturning of gravestones, stone lanterns etc., damaging of chimneys and mud-and-plaster warehouses.

VI. Disastrous: Demolition of houses landslips, fissures on the roads, the ground etc.

	No Feeling	Slight	Weak	Rather Strong	Strong	Very Strong	Disastrous
Scale	O	I	II	III	IV	V	VI
Acceleration (gal)	0.25-0.8	0.8-2.5	2.5-8	8-25	25-80	80-250	250<

5. The magnitude of an earthquake is classified according to the radius of the felt area assumed, roughly to be a circle as follows:-

(r) Remarkable earthquake: The radius of the felt area is greater than

- 300 km.
- (m) moderate earthquake: The radius is smaller than 300 km. but greater than 200 km.
  - (s) Earthquake of small felt area: The radius is smaller than 200 km. but greater than 100 km.
  - (l) Local earthquake: The radius is smaller than 100 km.
  - (d) Distant earthquake: The epicentral distance is greater than 300 km. from the coast of Taiwan.
6. The depth of hypocenter is as a rule expressed in terms of kilometers, If it is not determined so definitely, the following scale will be adopted.
- | Class | Very shallow | Shallow    | Rather deep | Deep     |
|-------|--------------|------------|-------------|----------|
| Depth | 0~30 km.     | 30~100 km. | 100~200 km. | >200 km. |
7. Geographical coordinates:  
 $\lambda$ : Longitude (E)       $\phi$ : Latitude (N)
- The coordinates are been experessed in degrees with one place of decimal.
8. Time  
 Time is referred to Greenwich Mean Time (G. M. T.)

#### GENERAL ASPECT OF EARTHQUAKES

January to March, 1958.

In January, one hundred and ten earthquakes were observed, twelve of which were felt by persons and the remains were the unfelt ones. The felt earthquakes in this month one was classified as moderate earthquake and another one was classified as small felt area one, and the remains were classified as local ones. The moderate earthquake occurred on 22nd, it's epicenter was located at 23.6 N. 121.3 E. and it's depth was estimated about 5km. The epicenter of the small felt areaearthquake which occurred on 19th was located at 24.3 N. 122.6 E., it's depth was estimated about 40km. Among those local earthquakes, one was happened in northern district, four were occurred in Hwalien district, four were occurred in the vicinity of Hsinkong and the last was occurred in the vicinity of Hengchun. There were five distant earth quakes recorded in this month, one of them occurred on 19th and it's epicenter was located near Ecuador, and the remains were very small and uncertain.

In February, one hundred and seventeen earthquakes were observed, five of the were felt by persons and the remains were the unfelt ones. Among the five felt earthquakes, three of them were classified as small felt area earthquakes of which one occurred in Hwalien and another in Hengchun, and the remains were local ones. Among those local earthquakes one was happened in Northern district and another in Taitung district. The epicenters and depth of the felt earthquakes in this month are given in the following figs. Six distant earthquakes were recorded at our stations,

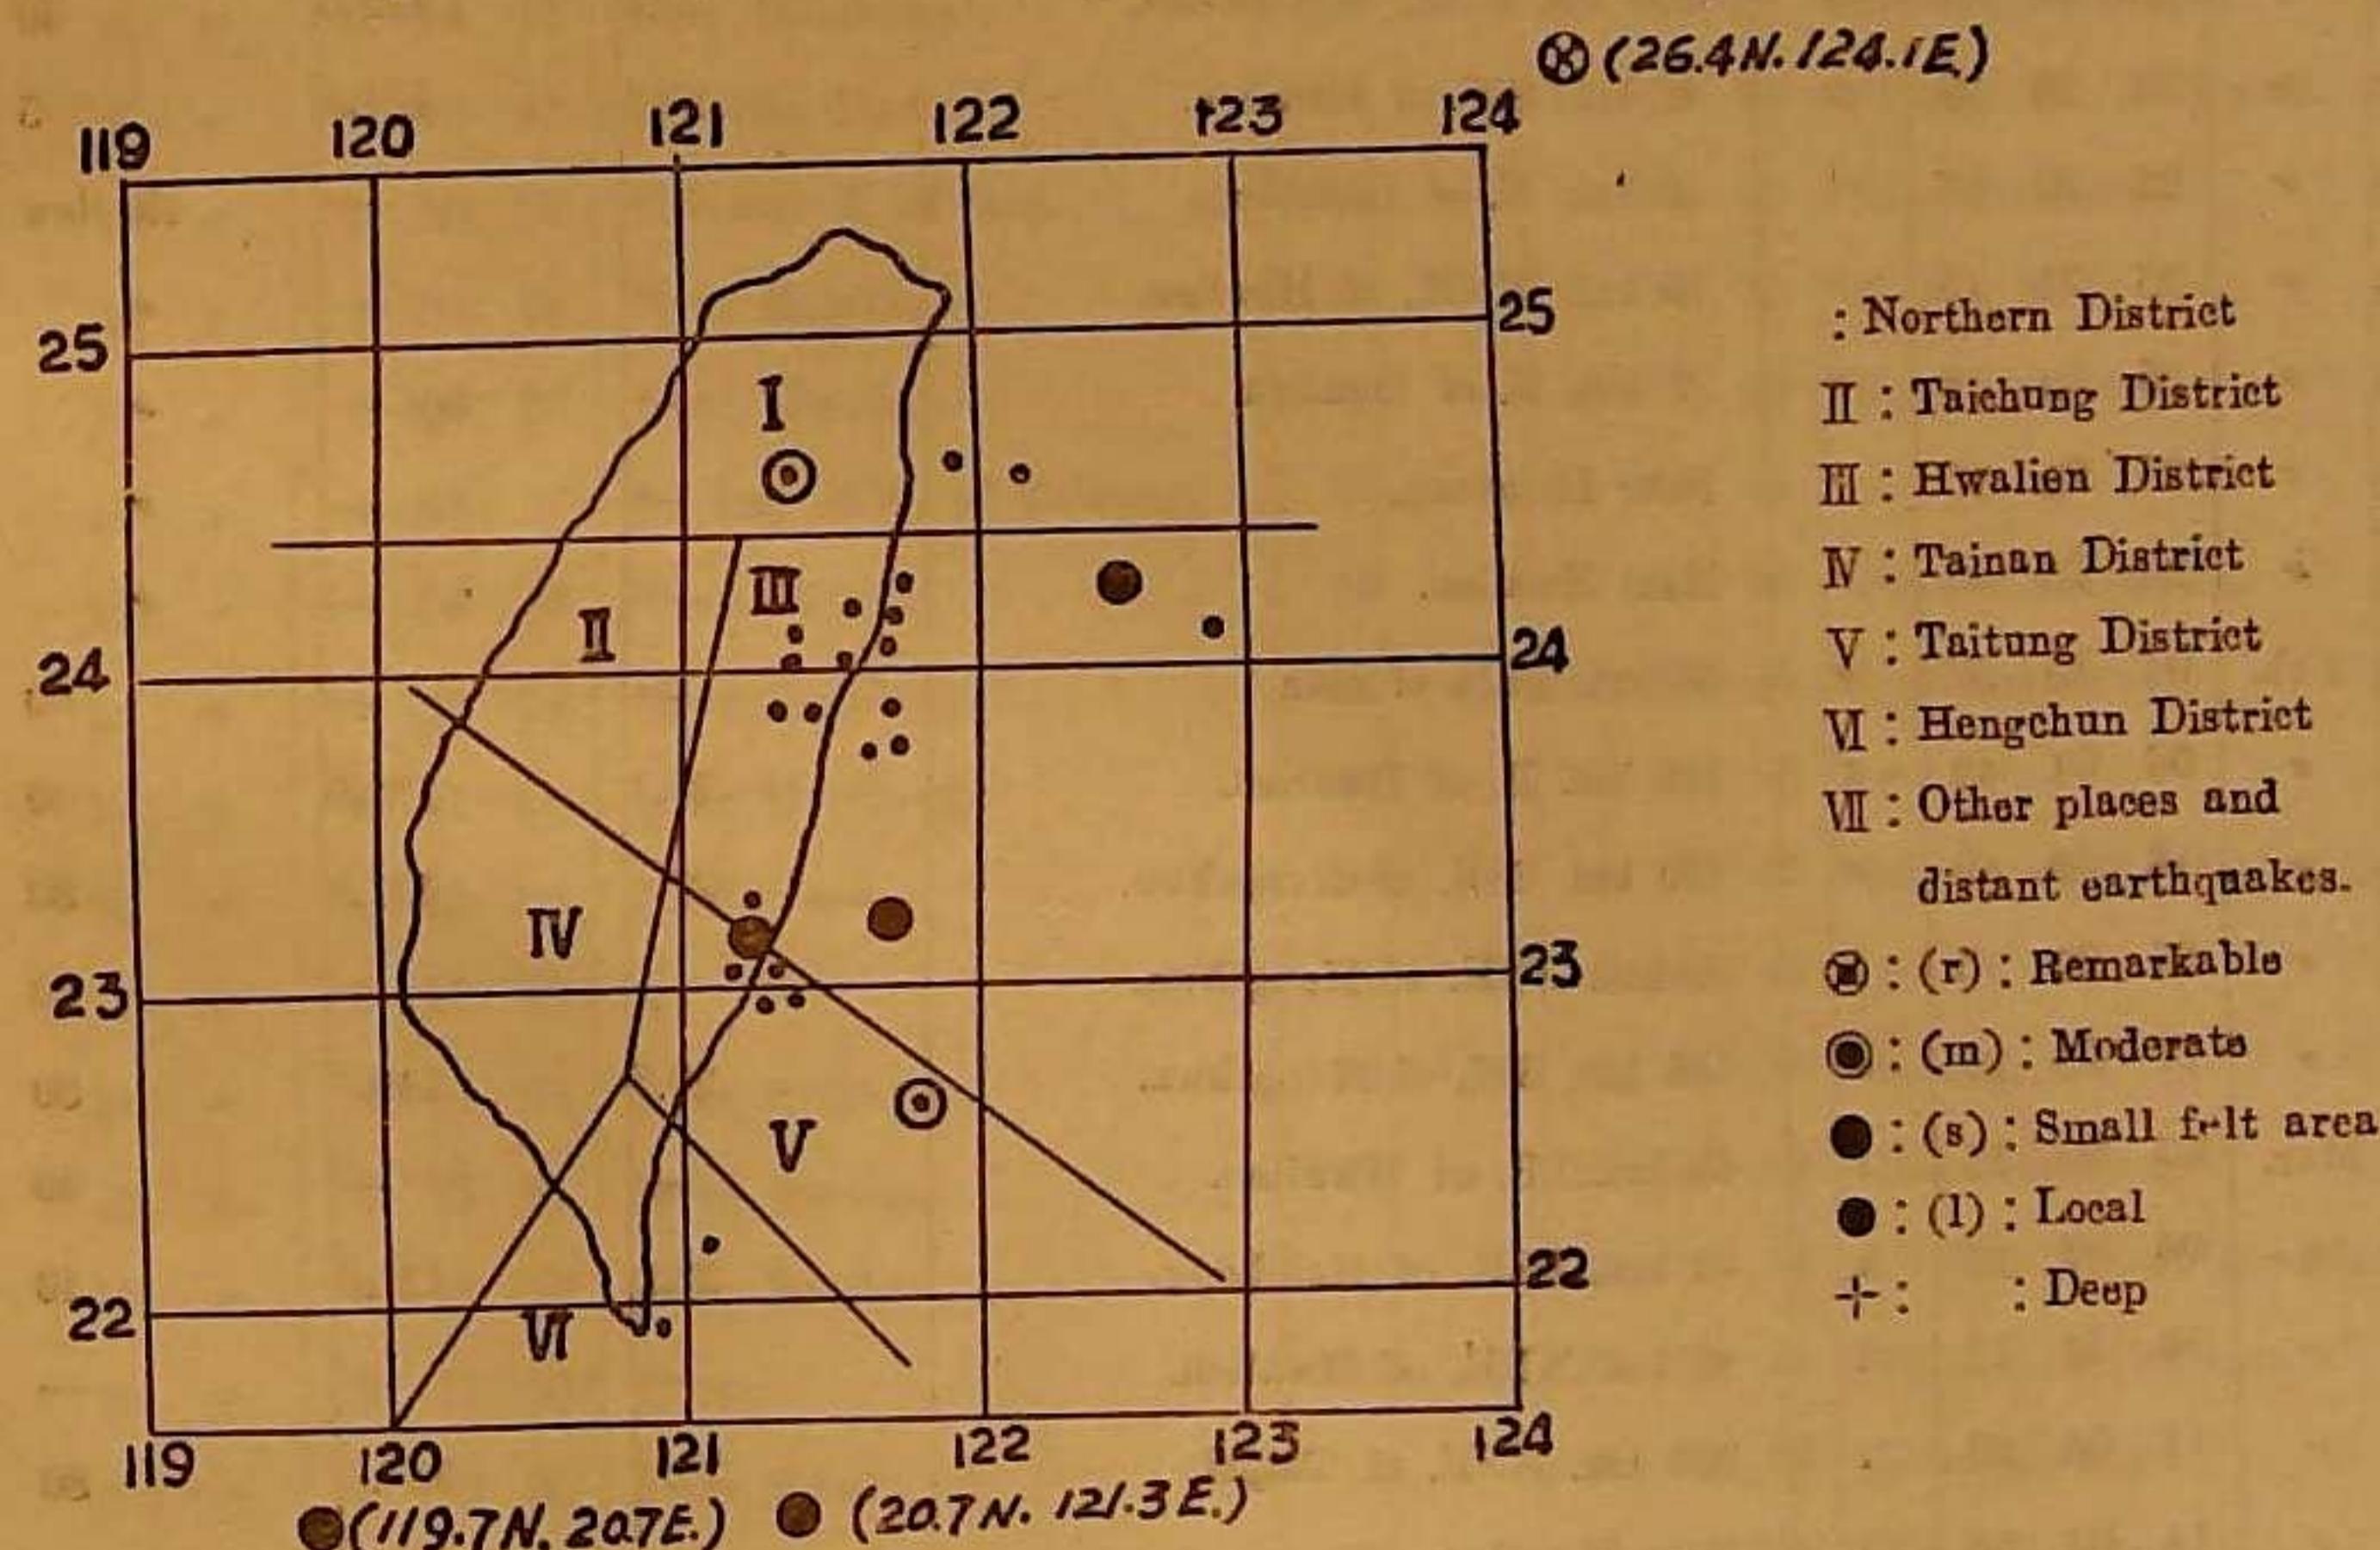

their epicenters were located in Tibet, Honshu Japan, Bonin Is., Batan Is., and Volcano Is. respectively.

In March, the number of earthquakes were One hundred and thirty one and has an increase in comparison to the previous months Among them thirteen were classified as felt earthpuakes and the rest were unfelt ones.

One remarkable earthquake occurred on 11th. It's epicenter was located at Ryukyu (26.4 N. 124.8 E.), and one moderate earthquake occurred on 15th, it's epicenter was locurred at 22.6 N. 124.8 E., and two of the felt ones were classified as small felt area earthquakes, and seven were classified as local ones.

Four distant earthquakes were recorded their epicenters at the following locations such as in philippines, Burma-Pakistan border and the rest was unknown.

Epicenters of Felt Earthquakes in January to March, 1958

Number of earthquakes classified according to its' Magnitudes and Districts, January to March, 1958

# THE SEISMOLOGICAL BULLETIN OF TAIWAN WEATHER BUREAU for April-June, 1958 VOL. V, No. 2

臺灣省氣象所

Published by Department of Seismology,  
TAIWAN WEATHER BUREAU.  
64, Fung Yuan Road, Taipei, Taiwan  
China.

## GENERAL ASPECT OF EARTHQUAKES

April to June, 1958.

In April, the number of earthquakes was one hundred and thirty one, among them seven were classified as felt earthquakes and the rest were unfelt ones. One small felt area earthquake happened in this month and the local earthquakes were six.

Ten distant earthquakes were recorded in Taiwan, three of their epicenters were located near 35 N. 150 E., one near Naha Island, and the rest was uncertain.

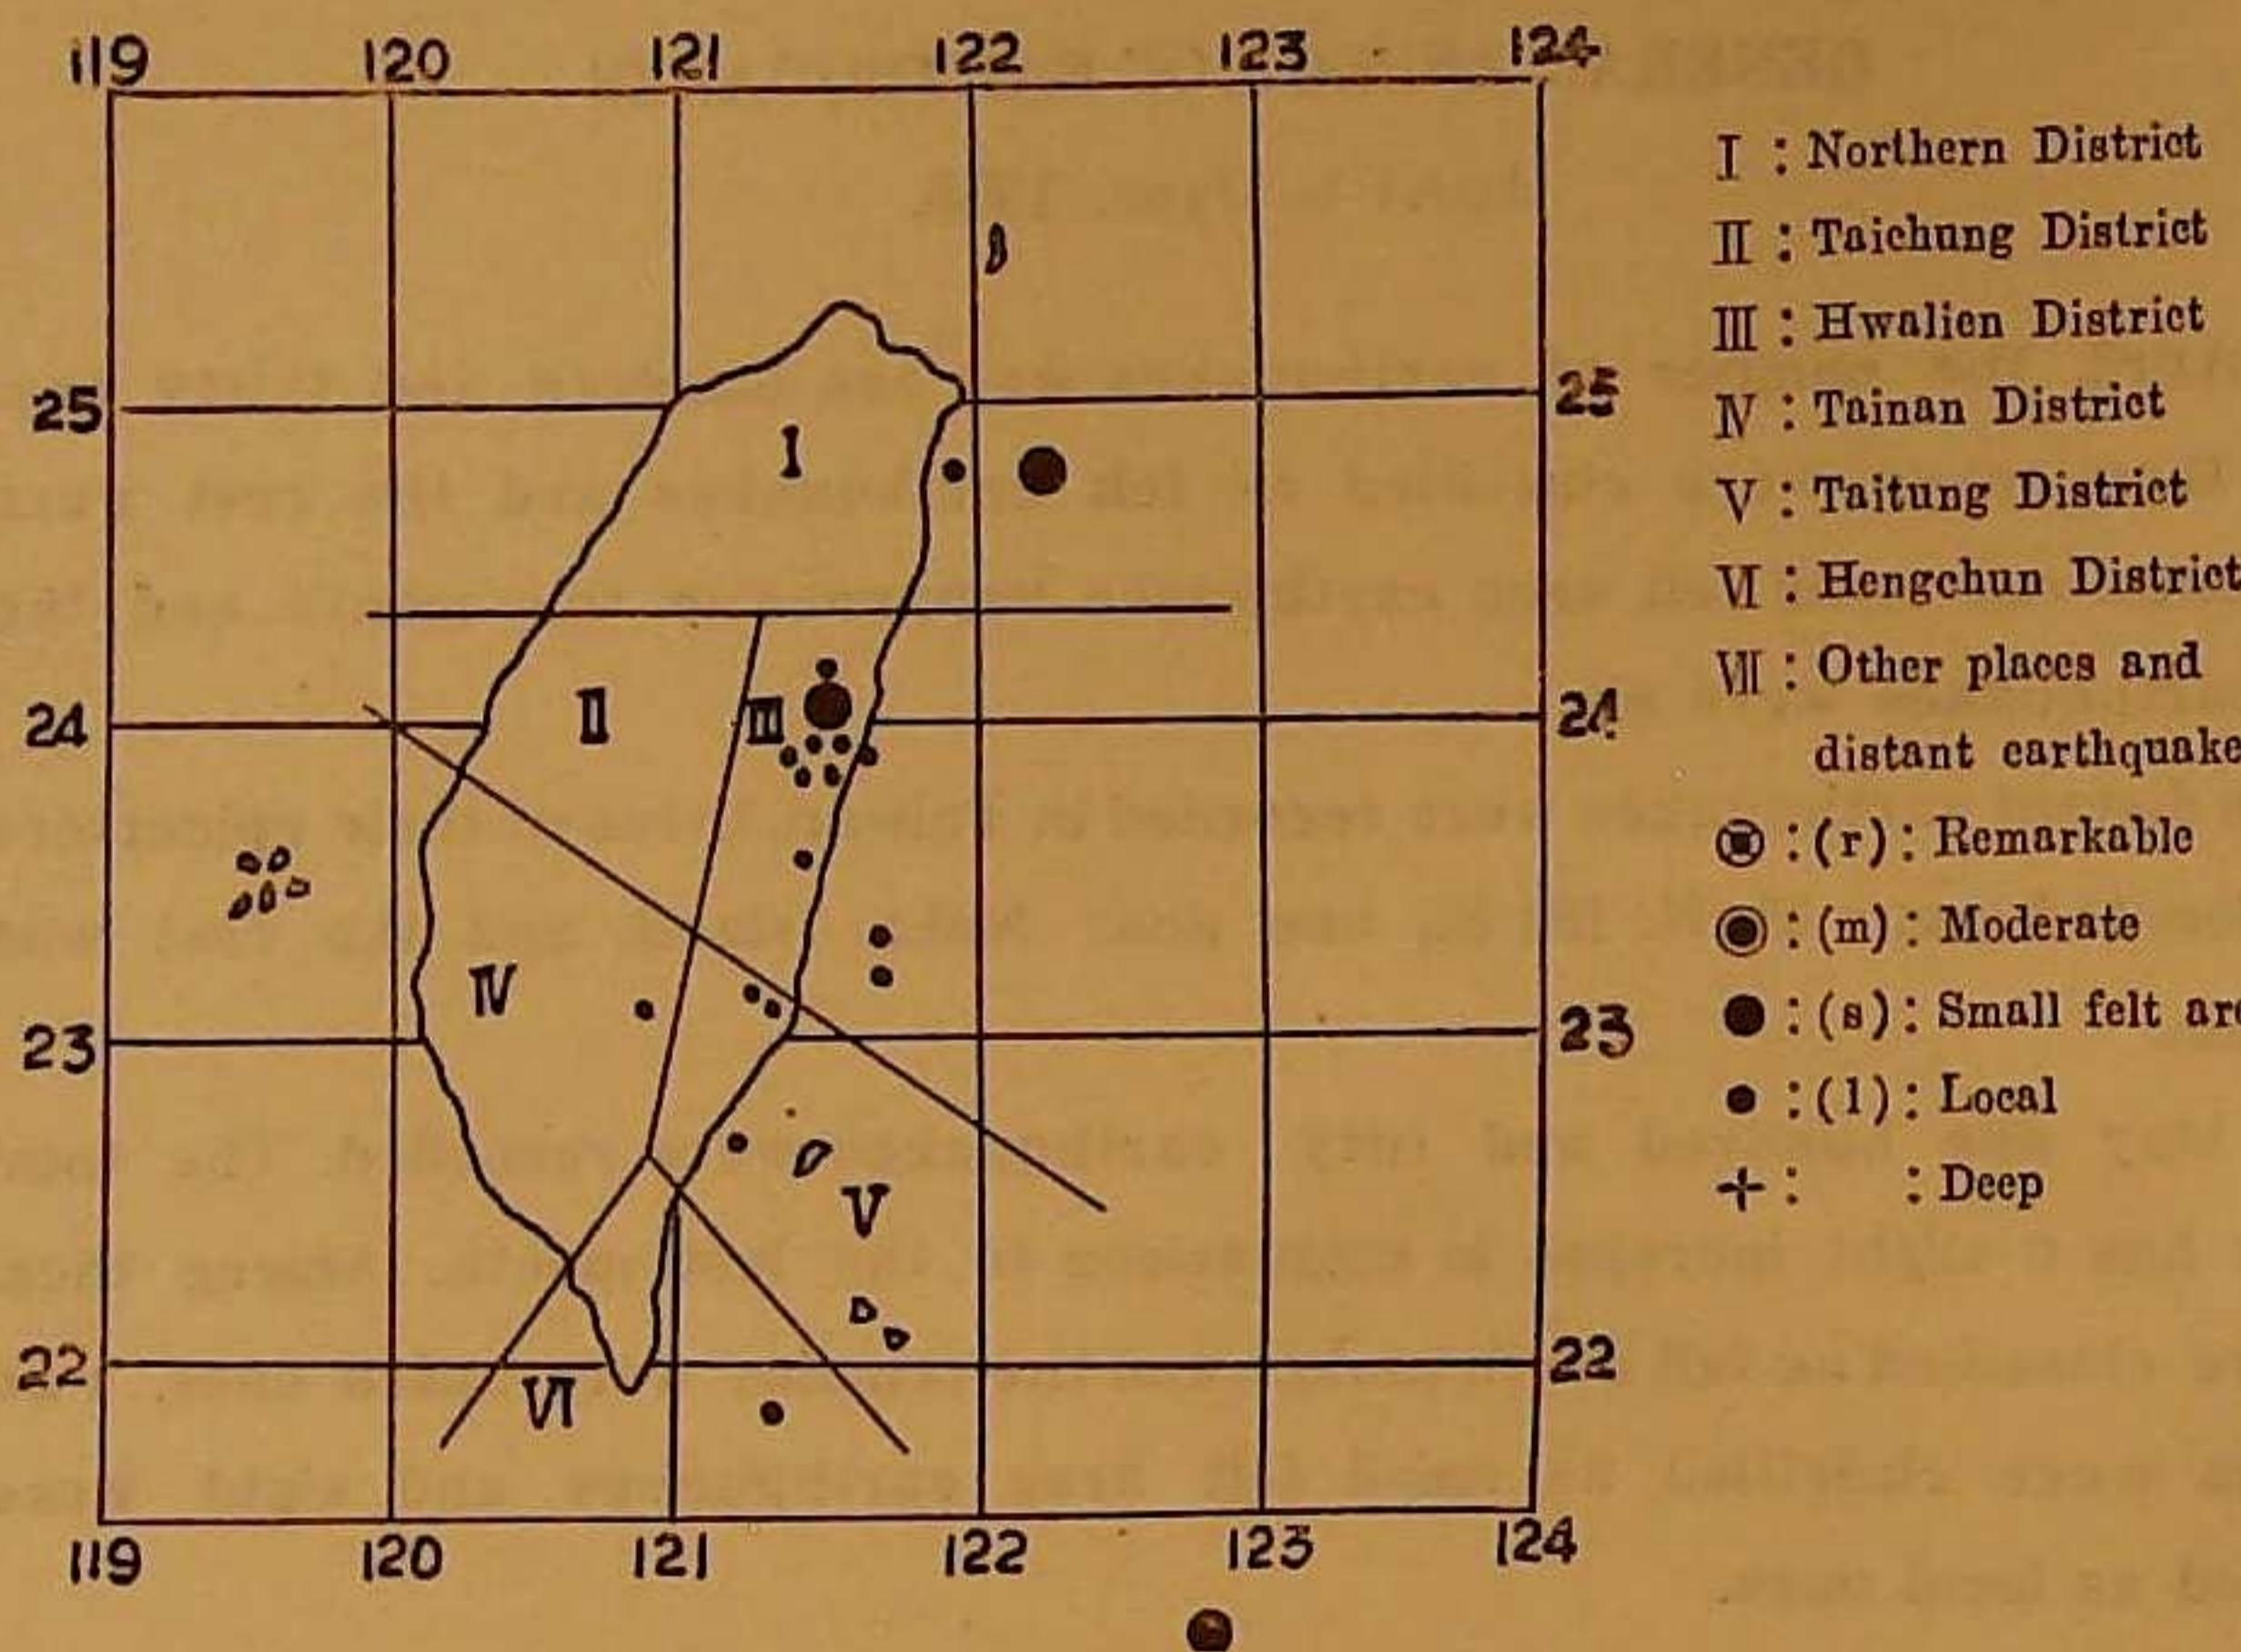

In May one hundred and fifty earthquakes were recorded. The total number has a slight increase in comparison to the last month. Among them ten were classified as felt earthquakes and the remains were unfelt ones. Two of them were classified as small felt area earthquakes and eight were classified as local ones.

Two distant earthquakes were recorded at our stations in this month and their epicenters were unknown.

In June, ninety eight earthquakes were occurred in Taiwan, it has a decrease in comparison to the former months, among them two were classified as local felt earthquakes, and the rest were unfelt earthquakes.

Four distant earthquakes were recorded in this month, one of their epicenters was located near Ryukyu, and the rest was unknown.

## Epicenters of Felt Earthquakes in April to June, 1958

 Number of earthquakes classified according to its' magnitudes  
 and Districts, April to June, 1958

China.

## GENERAL ASPECT OF EARTHQUAKES

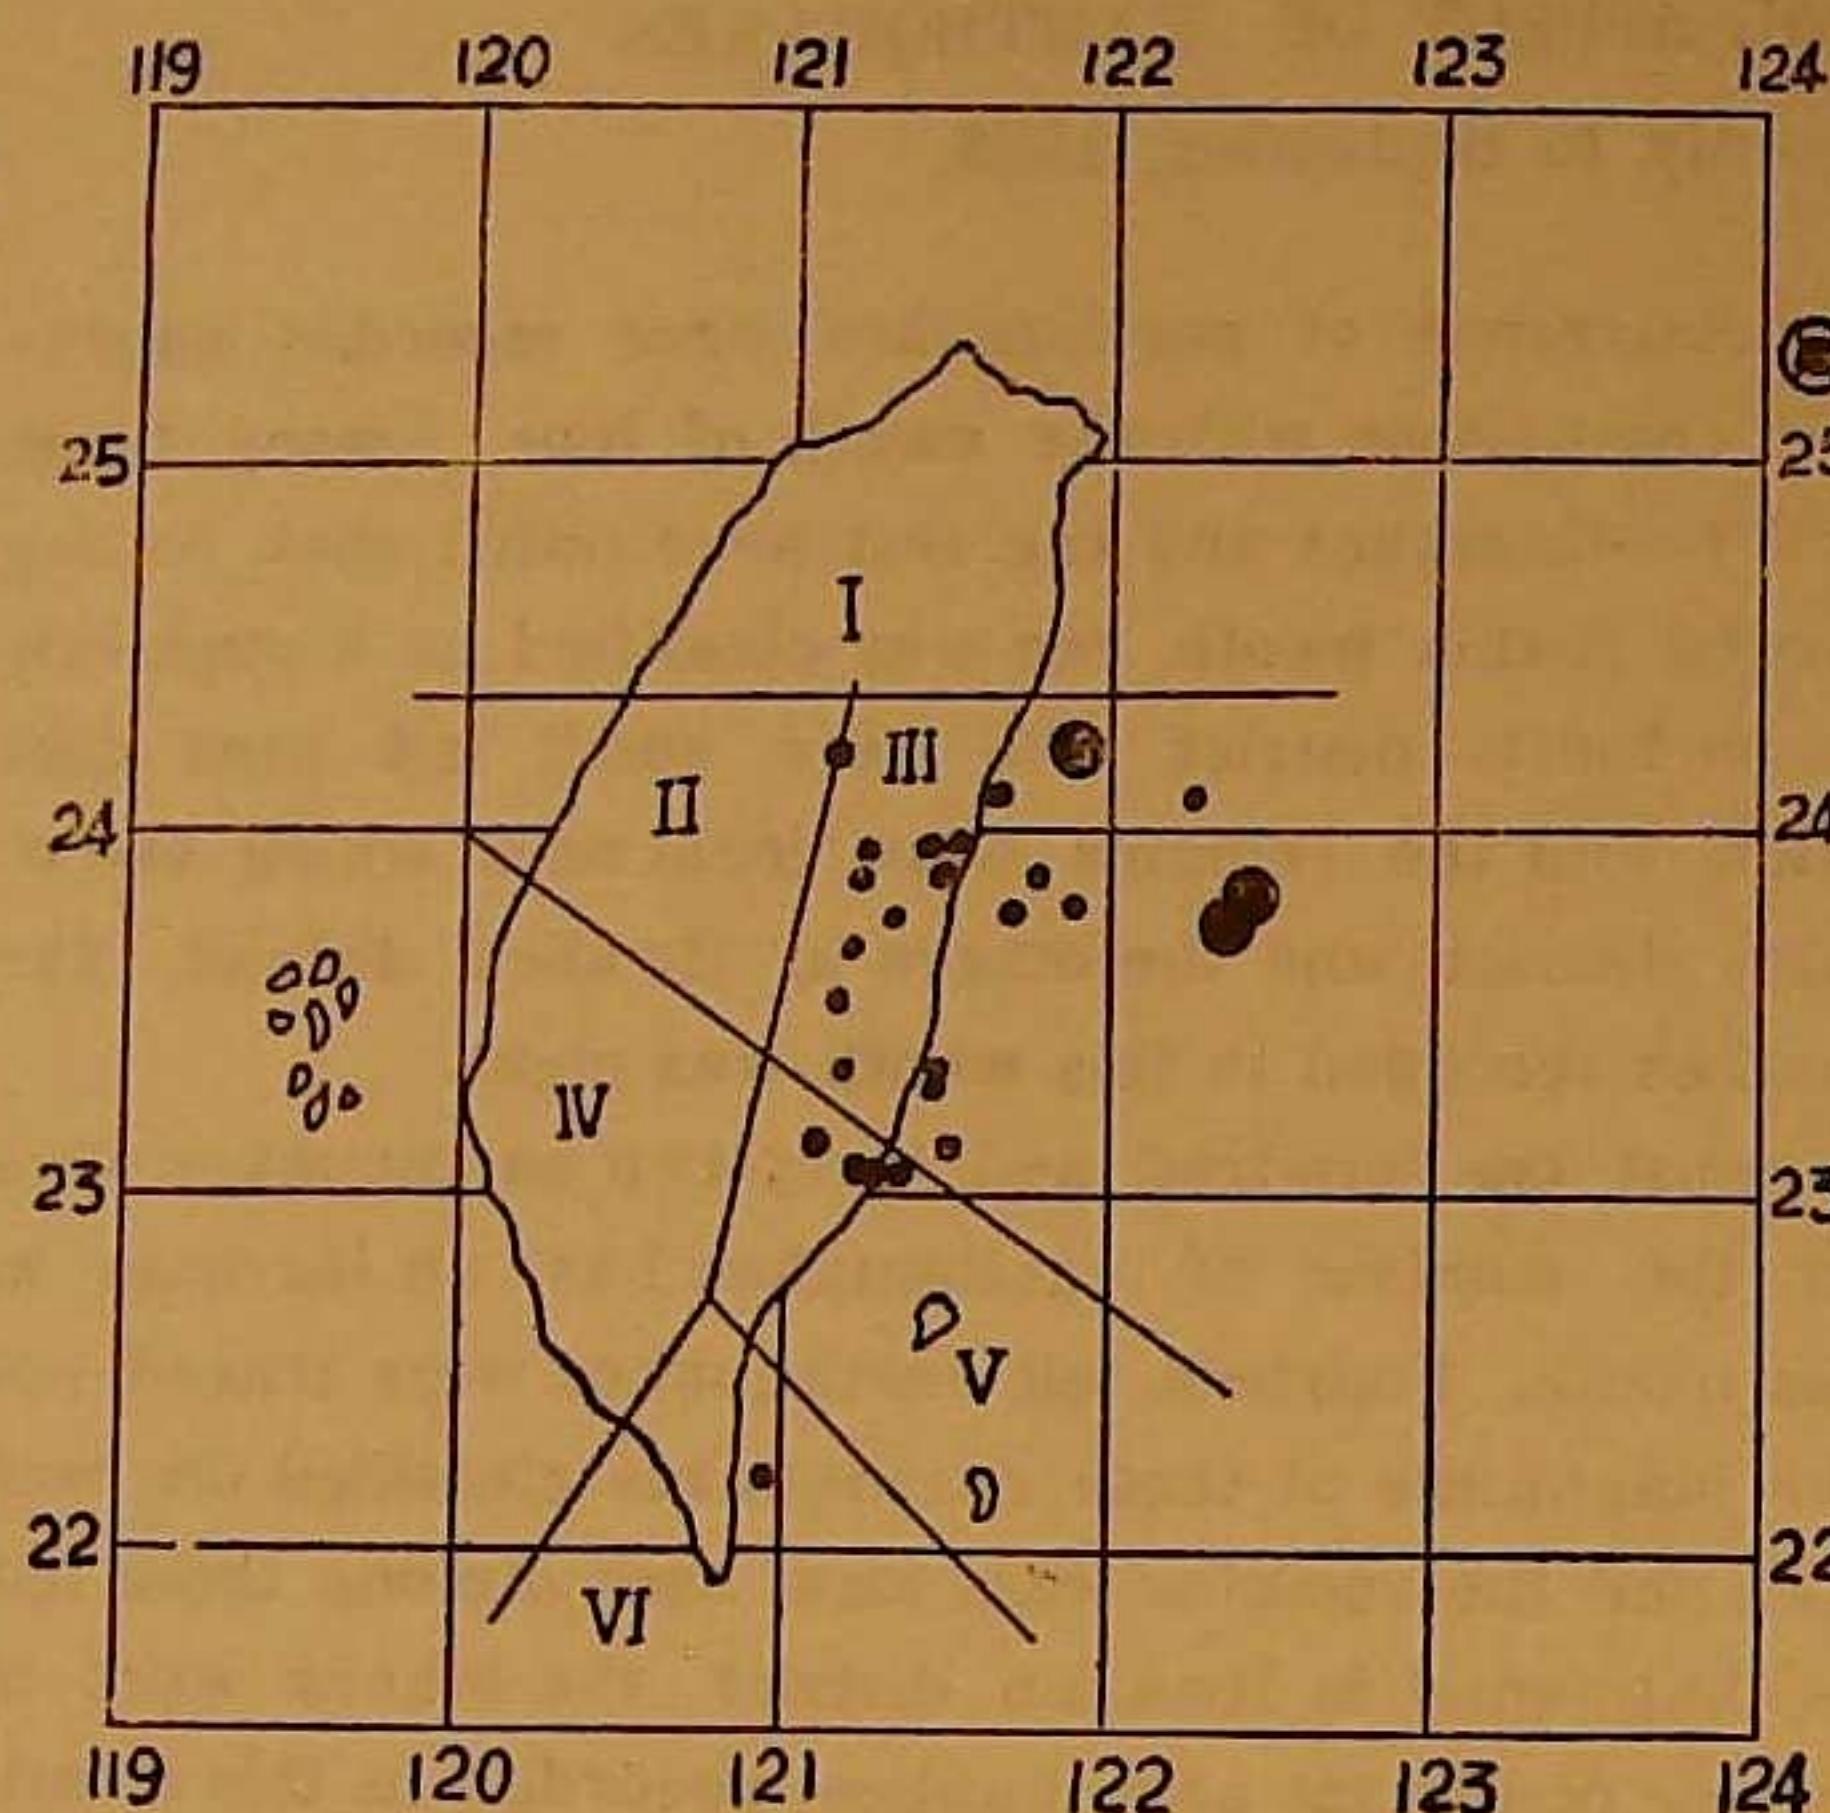

July to September, 1958.

In July, the number of occurrence of earthquakes were recorded ninety-four and has a decrease in comparison with the month of June. Among them, seven were classified as felt earthquakes and the rest were unfelt ones. Among the felt earthquakes recorded in this month, one was classified as a moderate earthquake occurred in northern district, two were small felt area ones occurred in Hwalien district, and the remains were local ones which one of them occurred in Hengchun district and the others in Hwalien district. The number of distant earthquakes recorded in this month was eight.

During the month of August, one hundred and forty-two earthquakes were recorded in Taiwan and the number of earthquakes has an increase in comparison to the previous month. Fourteen felt earthquakes were traced out from the seismograms. The magnitude of these earthquakes classified one was small felt area earthquake and the remains were local ones. Among these felt earthquakes, eleven were happened in Hwalien district, the others were in Taitung district. The number of distant earthquakes recorded in this month was eleven.

As in the month of September, the number of occurrence of earthquakes has a decrease to fifty-six. The earthquakes occurred in the month of August was recorded up to a figure of eighty-six. Six of them was classified as felt earthquakes and the remains were unfelt ones. The felt earthquakes in this month were all classified as local ones. The epicenters of these felt earthquakes were located five in Hwalien and one in Taitung district. The number of distant earthquakes recorded in this month was nine.

## Epicenters of Felt Earthquakes in July to September, 1958.

Number of earthquakes classified according to it's magnitude and districts July to September 1958.

Classification Districts	Number of felt earthquakes					Number of unfelt earthquakes	Total
	Magnitudes Remarkable	Moderate	Small felt area	Local	Total

# THE SEISMOLOGICAL BULLETIN OF TAIWAN WEATHER BUREAU for October to December, 1958. VOL. V, No. 4

臺灣省氣象所

Published by Department of Seismology,  
TAIWAN WEATHER BUREAU.  
64, Kung Yuan Road, Taipei, Taiwan  
China.

### General Aspect of Earthquakes

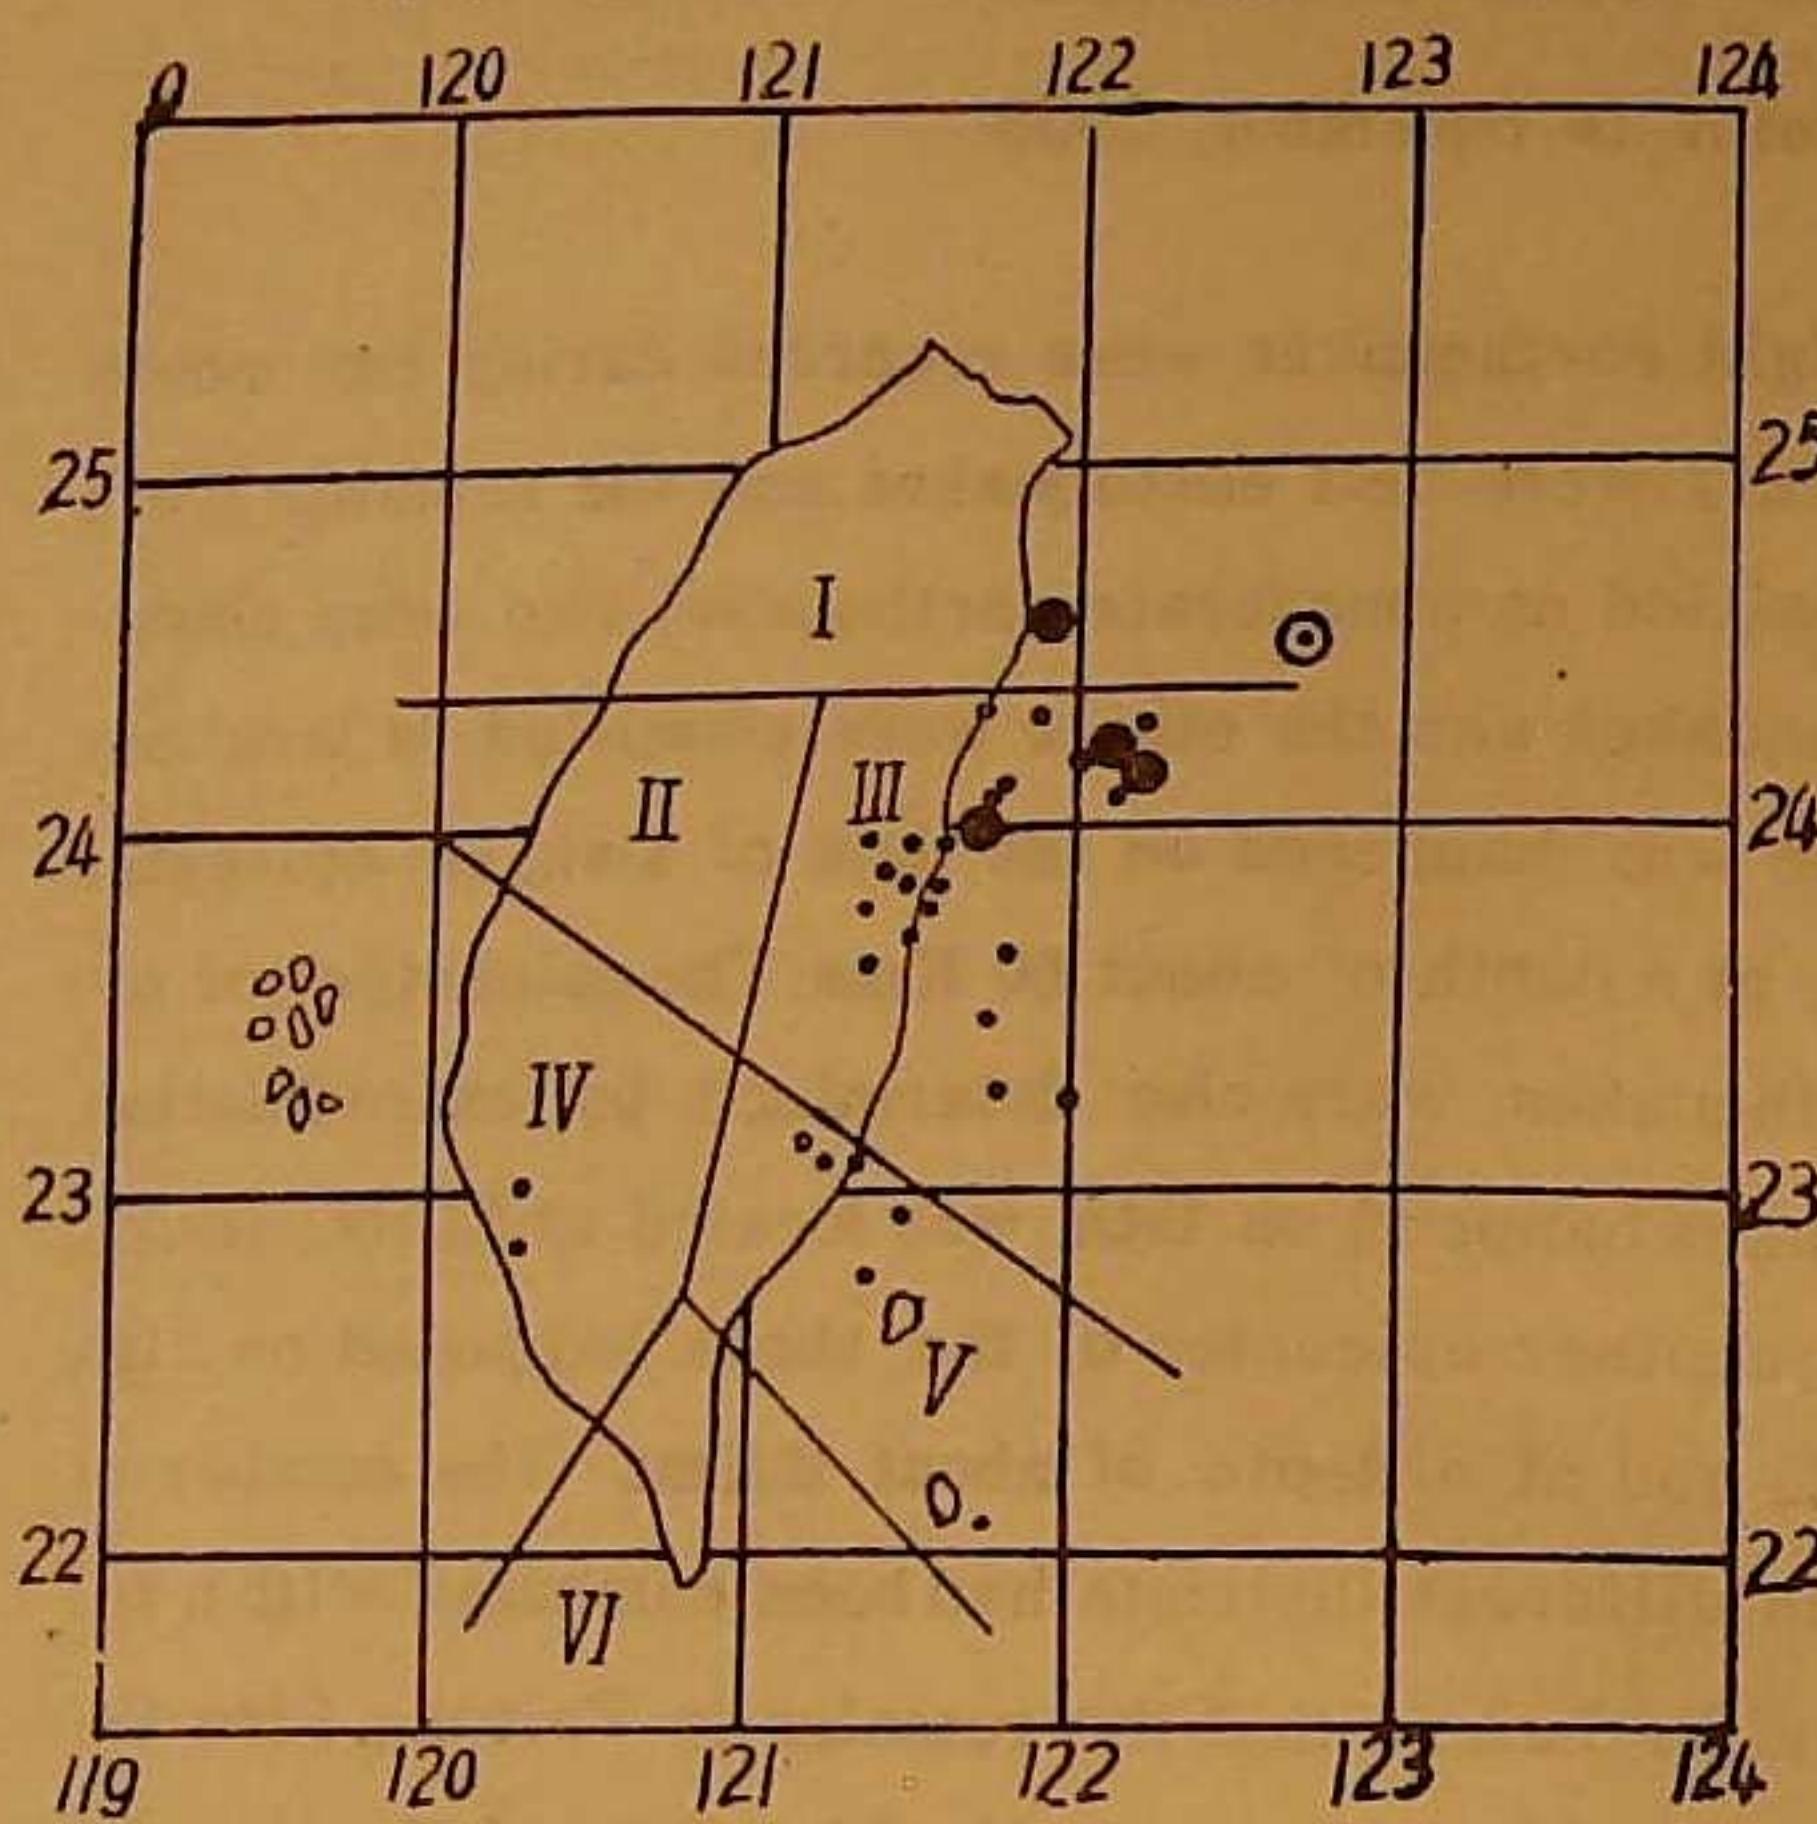

October to December, 1958.

One hundred and forty-eight earthquakes were recorded during the month of October. Among them twenty were felt earthquakes and the remains were unfelt ones. Just one was classified as a moderate earthquake, two were classified as small felt area earthquakes and the others were classified as local ones. The moderate earthquake was happened on the date of 31st., its epicenter was located at 24.5N., 122.8E., at a depth of about 60 Kms. The epicenters of other two small felt area earthquakes were also determined by extrapolation. The epicenter of the earthquakes happened on 19th, was located at 24.1N., 122.1E. at a depth of about 20Kms. another epicenter of the shock happened on 21st, was located at 24.6N., 121.9E., and at a depth of about 10Kms. The number of local earthquakes happened in different districts had been computed with a result of fourteen in Hwalian one in Tainan and the remains in Taitung. Fire distant earthquakes were recorded during this month. The data of these major earthquakes is listed in a table attached to the last part of this pamphlet.

In November, the number of occurrence of earthquakes has a decrease of forty-one cases in comparison to the previous month which were amounted to a figure of one hundred and seven. Among them, eight were classified as felt earthquakes and the remains were unfelt ones. The felt earthquakes in this month, one was classified as small felt area that was happened on 20th. Its epicenter was located at 24.1N., 121.8E. at a depth about 10Kms. The remains are local ones. Eleven distant earthquakes were recorded in this month. They are listed in the table of major earthquakes.

During the month of December, one hundred and eight earthquakes were recorded in Taiwan. Six of them were felt by persons, according to the magnitude of earthquakes, two were classified as small felt area ones and the remains were local ones. The small felt area earthquakes happened in this month. One was reported on 7th and its epicenter was located at 131Kms. SE. of Hengchun, and other earthquake was happened on 14th which was to be extrapolated at 66Kms. NE. of Hwalian. The number of distant earthquakes in December was recorded eleven. The initial motion, maximum amplitude and period of these shocks are given in the last part of this Bulletin under the table of major earthquakes.

## Epicenters of Felt Earthquakes in October to December 1958.

Number of earthquakes classified according to its magnitude and Districts October to December 1958.
